MICHAUD

60 YEARS EXPERTISE

MICHAUD is a French industrial group specialised in energy distribution networks for more than 60 years.

MICHAUD Export, subsidiary dedicated to international markets, develops and sells solutions according to applicable standards thanks to its know-how as well as its relationships with local users.

100 Million €

+ 70 countries

100 protected
innovations yearly

+ 300 employees

PRESCRIPTION & DIAGNOSIS

A strong market understanding and a recognised technical knowledge to serve your projects in order to propose suitable solutions.

INNOVATION & QUALITY

10% of the work force is dedicated to R&D. We develop tomorrow's solutions and guarantee quality and reliability of products thanks to a COFRAC accredited and independent test laboratory (accreditation n°1-0579).

FITTERS TRAINING

As preferred technical partner, we encourage learning and knowledge transmission together with product commercialisation.

According to the international standards, MICHAUD designs and develops energy distribution solutions. The product range is focused on two fields of expertise:

- **Low Voltage Network:** to connect and protect the overhead and underground electrical lines ;

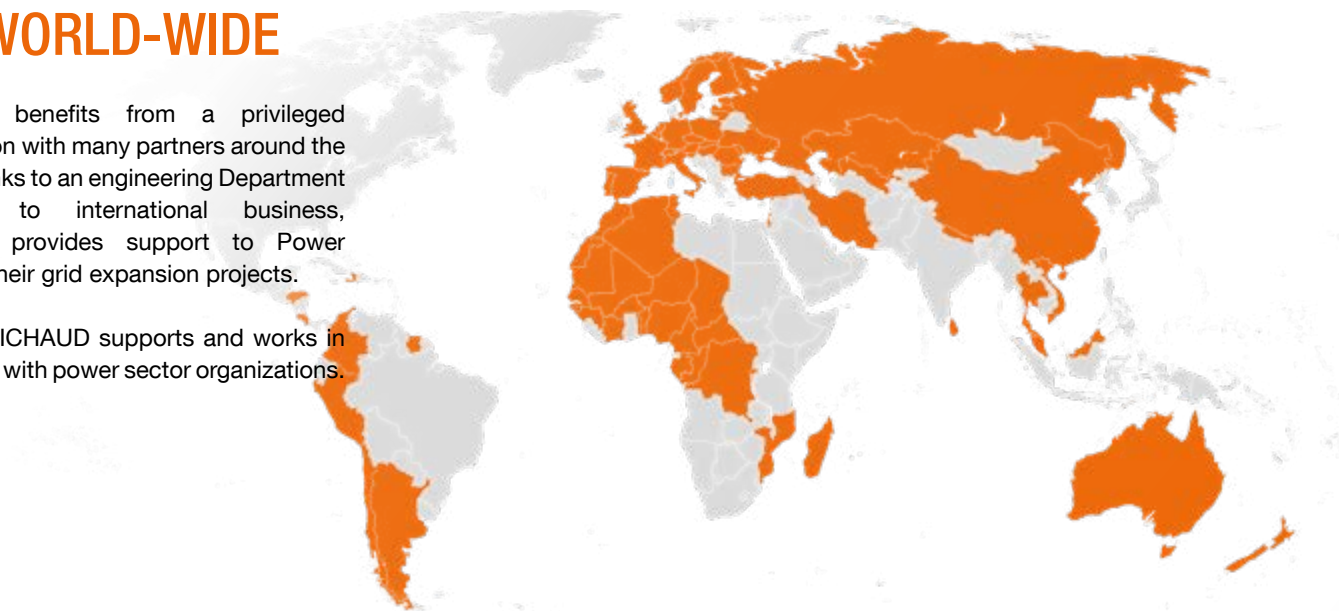

- **Energy Controlling:** to manage and offer easy access to electricity.

+70 PARTNERS IN THE WORLD-WIDE

MICHAUD benefits from a privileged collaboration with many partners around the world. Thanks to an engineering Department dedicated to international business, MICHAUD provides support to Power Utilities in their grid expansion projects.

Besides, MICHAUD supports and works in partnership with power sector organizations.

----------------------------	------

The **low voltage overhead connectors range** is the historical core business of MICHAUD. The company has been able to integrate the issues of worldwide power utilities into the design of its products.

EXPERTISE

MICHAUD developed its **technical skills** with the transition of overhead bare lines into Aerial Bundled Conductors (A.B.C). Thanks to large **innovation ability**, the company has been a pioneer for a long time in the adaptation to this new environment.

LONGEVITY

MICHAUD acquired a **solid experience in electrical connections** and more specifically in the fields of insulation piercing, bimetal connections and crimping guaranteeing the power lines durability.

COMPETITIVENESS

By taking into account the **overall cost** of the products over years (purchasing, maintenance, energy performance), MICHAUD offers a long terms **competitive range** of low voltage line accessories (with service life higher than 40 years).

The overhead networks

Realizing a **tap connection** is the main expected function on low voltage lines in order to distribute electricity to consumers. The connection to the network is mostly performed by means of a service connector.

Analysis of the line cost

ZOOM

Cost allocated to connectors is only about **2%**. However this item is at the origin of **80%** of network incidents. They are the result of a failure of the connection, an installation error or even a too slight formation.

Indeed, the insulation piercing connector is a major accessory for which the connection quality is the most important.

MICHAUD solutions aim to facilitate the installation and therefore avoid fitters mistake thanks to technologies enabling to ensure a correct and effective installation.

Distribution and network junctions

With the rise of consumers to connect to the network, it is needed to rely on solutions which enable a readability of the network, balanced charges and to guarantee easy fitters' operations.

The multiple connection box enables to create a **distribution point** towards several service connections.

Thanks to one network inlet and one outlet, the box can be installed on the line and this way it offers **an alternative solution to the use of connectors** to perform network tapping. It also gives possibilities to connect future consumers.

SOLUTIONS FOR OVERHEAD NETWORK

A diversity and flexibility with the offer

An adaptation to projects and local requirements is possible thanks to MICHAUD human scale and its wide range enabling **reactivity** and **flexibility** when facing specific applications.

Preinsulated technologies to ensure watertightness

To guarantee the connections waterproofness on Aerial Bundled Conductors is significant challenge. A connection that is not set-up the right way can lead to a risk of water penetration and endanger the security and durability of the equipment.

MICHAUD experience

In the 1980's, MICHAUD was first producer in the world to develop the preinsulated compression sleeve MJPB for the Power French Company ErDF. This sleeve designed to offer a dielectric strength of 6kV into water was really appreciated. This technology has been expanded today to other products of the range showing reliability and efficiency on the field.

Since 40 years

MICHAUD offers a range of preinsulated sleeves adapted to various field applications enabling to perform the junction between two conductors of exact same type or with different characteristics (nature, material, size...).

A.B.C. network (**MJPT**)
Service aerial sub-surface (**MJPBAS**)

Zoom on the accessories' installation

Mechanical tightening

- Flexible technology on the field (wide range of conductor's section)
- Disconnection / reconnection (if the terminal uses stripping technology)
- It must be performed without mechanical load

Crimping

- It can be performed under mechanical load
- Good durability
- Mono-section

Service insulation piercing connector

K322

K441

with yellow shear head indicator

Application

This connector is designed to connect the insulated service conductors to the low voltage A.B.C. (Aerial Bundled Conductors).

Description

Connector general features:

- Insulation piercing is carried out on the main and tap conductors simultaneously in a single tightening operation.
- The dielectric strength in water is greater than 6kV.
- The tightening screw is potential free.
- Tightening efficiency is ensured by a shear head screw.
- Connectors K441, K442 and K443 are fitted with a yellow shear head indicator that disappears when head is sheared-off, being a clear visual confirmation of good tightening from ground level. It increases head height by 10 mm.

This connector meets the criteria of the NF C 33-020 and EN 50-483 standards.

Connector end cap:

- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand.
- It is carrying membranes instead of grease, granting watertightness around tap conductor end on long term basis.
- It is glued on connector body so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).
- It can be equipped with a hard end cap, gripping and covering so, in case rigid cover is required. (Part Number K246 : please enquire for further information).

Installation video available on www.michaud-export.com

Service insulation piercing connector with Test Probe

K336

Michaud Exclusivity
Test probe

K338

with yellow shear head indicator

Application

This connector is designed to connect the insulated service conductors to the low voltage A.B.C. (Aerial Bundled Conductors). It is equipped with a Test probe on the flexible sealing end cap. This enables the potential to be checked between 2 connectors installed on neutral and phase conductors and thus ensures good connection.

Description

- Insulation piercing is carried out on the main conductor and on the tap conductor simultaneously in a single tightening operation.
- The dielectric strength in water is greater than 6kV even after several piercings of the flexible end cap Test Probe using a standardised pin of a measuring device (3 to 5 times maximum).
- The tightening screw is potential free.
- Tightening efficiency is ensured by a shear head screw (nominal torque of 10Nm).
- The connector K338 is fitted with a yellow shear head indicator that disappears when head is sheared-off, being a clear visual confirmation of good tightening from ground level. It increases head height by 10 mm.
- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand. It is glued on connector body so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Modified sealing end cap for test probe access :

Installation

- Insert the insulated tap conductor into the connector so that its end seats in the flexible end cap.
- Use a 13mm spanner and tighten the connector on the insulated main conductor of the bundle until the shear head breaks.
- The 17mm permanent screw head is only provided for possible dismantling, and must not be used to re-tighten the screw after the 13mm head has broken.
- Installation can be carried out on a live line but with no load on the tap conductor.

Service insulation piercing connector
for bare conductor

K258

K470
with yellow shear head indicator

Application

This connector is designed to connect the insulated service conductors to the low voltage overhead copper or aluminium alloy bare conductor network.
Two versions are available according to the type of conductor to be connected (Al or Cu):
- CNA (with aluminium alloy contact bridges),
- CNU (with rough brass contact bridges).

Description

Connector general features:

- Tightening of the bare main conductor and piercing of the tap conductor are carried out simultaneously in a single tightening operation.
- The tightening screw is potential free.
- Tightening efficiency is ensured by a shear head screw.
- Connectors K470 and K471 are fitted with a yellow shear head indicator that disappears when head is sheared-off, being a clear visual confirmation of good tightening from ground level. It increases head height by 10 mm.

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Connector end cap:

- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand.
- It is carrying membranes instead of grease, granting watertightness around tap conductor end on long term basis.
- It is glued on connector body so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).
- It can be equipped with a hard end cap, gripping and covering so, in case rigid cover is required. (Part Number K246 : please enquire for further information).

Installation

- Insert the insulated tap conductor into the connector so that its end seats in the flexible end cap.
- Use a 13mm spanner and tighten the connector on the bare main conductor until the shear head breaks.
- The 17mm permanent screw head is only provided for possible dismantling, and must not be used to re-tighten the screw after the 13mm head has broken.
- Installation can be carried out on a live line but with no load on the tap conductor.

INSTALLATION / LV insulated toolings

Two stages bare conductor service connector

K235
with yellow shear head indicator

Application

This connector designed to connect the insulated service conductors to the low voltage overhead aluminium alloy or copper bare conductor network. Two versions are available according to the type of conductor to be connected (Al or Cu). The tap and main cables are connected separately step by step to improve the electrical connection:

- 1. First the tap line is connected by piercing the insulation,**
- 2. Then the main line is connected.**

Installation can be carried out under a maximum load of 100A.

The benefit:

- + Connection under load

Description

Connector general features:

- Piercing of the tap line and tightening of the main conductor are carried out step by step in a single tightening operation.
- The tightening screw is potential free.
- Tightening efficiency is ensured by a shear head screw.
- This connector is fitted with a yellow shear head indicator that disappears when head is sheared-off, being a clear visual confirmation of good tightening from ground level. It increases head height by 10 mm.

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Connector end cap:

- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand.
- It is carrying membranes instead of grease, granting watertightness around tap conductor end on long term basis.
- It is glued on connector body so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).
- It can be equipped with a hard end cap, gripping and covering so, in case rigid cover is required. (Part Number K246 : please enquire for further information).

Installation

Insert the insulated service conductor into the connector so that its end seats in the flexible end cap. **1 2**
Install the connector correctly on the bare line. The conductor stays on the lag elements made of synthetic material. **3**
Note: The contact bridges remain away from the bare conductor.
Use a 13mm spanner and follow the two stage connection principle hereafter:

(a) Connection of the insulated tap cable:

- The insulated tap conductor is connected by insulating piercing. **4**

(b) Connection of the bare main cable:

- Tighten the connector on the bare conductor,
- The lag elements are automatically pushed away and the bare main conductor is connected, **5**
- Tighten the connector fully on to the bare conductor until the shear head breaks. **6**

The 17mm permanent screw head is only provided for possible dismantling. It must no be used to re-tighten the screw after the 13mm head has broken.

Installation can be carried out on a live line but with a maximum load of 100A on the tap conductor.

STAINLESS STEEL FASTENERS (SF) + YELLOW SHEAR HEAD INDICATOR

Service connector with independent tightening

Dismountable tap contact single service connector

K397

Application

This connector designed to connect independently the insulated service conductors to the low voltage A.B.C. (Aerial Bundled Conductors). While connection of the main line conductor uses insulation piercing technology, that of the tap line uses stripping technology.

Description

- The dielectric strength in water is greater than 6kV.
- The tightening screws are potential free.
- Tightening efficiency is ensured by shear head screws.
- The independent tightening tap line can accommodate solid or stranded core aluminium or copper insulated conductors with sections between 2.5 and 35mm².

This connector meets the criteria of the **NF C 33-020** and **EN 50483** standards.

Installation

- Install the connector on the main conductor using a 13mm spanner until the shear head breaks.
- The 17mm permanent screw head is only provided for possible dismantling. It must not be used to re-tighten the screw after the 13mm head has broken.
- Strip the tap conductor over the recommended length and brush with neutral grease.
- Insert the conductor fully into the connector by piercing the seal wall.
- Tighten using a 13mm spanner until the shear head breaks.
- If dismantling and reassembling the tap, tighten the screw to the torque indicated on the head.
- It can be installed live. The load on the tap conductor must not exceed 90A.
- It can be disconnected live, but with no load.

Bare conductor service connector with independent tightening

K396

Application

This connector is used for connecting independently the insulated service conductors to the low voltage overhead copper bare conductor network.

Description

- The tightening screws are potential free.
- Tightening efficiency is ensured by shear head screws.
- The independent tightening can accommodate solid or stranded core aluminium or copper insulated conductors with sections between 2.5 and 35mm².

This connector meets the criteria of **NF C 33-020**.

Dimensions in mm

Installation

- Strip the tap conductor over the recommended length and brush with neutral grease.
- Insert the tap line fully, piercing the seal wall.
- Tighten using a 13mm spanner until the shear head breaks holding the tap line in your hand.
- Use a 13mm spanner and tighten the connector on the bare main conductor until the shear head breaks.
- The 17mm permanent screw head is only provided for possible dismantling. It must not be used to re-tighten the screw after the 13mm head has broken.
- Installation can be carried out on a live line but with no load on the tap conductor.
- If dismantling and reassembling the tap, tighten the screw to the torque indicated on the head.
- It can be disconnected live, but with no load.

INSTALLATION / LV insulated toolings

Multitap service connector

Description

- Connector general features:**
- The dielectric strength in water is greater than 6kV.
 - The tightening screws are potential free.
 - Tightening efficiency is ensured by shear head screws.
 - The tap conductor of K391 and K393 versions uses the stripping technology. It uses the insulation piercing technology for the other versions.
 - This independent tightening tap conductor can accommodate solid or stranded core aluminium or copper insulated conductors with sections between 6 and 35mm².
 - The K389 connector features a yellow indicator which disappears when the fuse head is correctly broken, making it easy to check from the ground that it is correctly tightened. It increases the height of the head by 10mm.

These connectors comply with **NF C 33-020** and **EN 50-483** standards.

Sealing cap for connectors K390, K391, K392, K393, K394 and K389 (2 starts) :

- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand.
- It is carrying membranes instead of grease, granting watertightness around tap conductor end on long term basis.
- It is glued on connector body so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).
- It can be equipped with a hard end cap, gripping and covering so, in case rigid cover is required. (Part Number K246: please enquire for further information).

SEE SHEET
INSTALLATION / LV insulated toolings

Aerial connection box

P436
6 outlets
4 connection blocks

P439
9 outlets
4 connection blocks

Application

These boxes are designed to establish up to 6 (P436) or 9 (P439) single phase connections or up to 3 three phases connections at one point of the low voltage aerial bundled network. These boxes can be installed on a facade or a pole. They can also used at the network end.

+ Both models are available with insulation piercing or stripping technology

The benefits :

- + Perform single phase or three phases connections
- + Better spread charges on the network, thanks to the connections visibility
- + Guarantee the network durability (better resistance to corrosion and humidity)
- + Reduce the number of connectors (safer network organisation, strengthened fraud-prevention)
- + Disconnect subscribers easily (network cable unimpacted, possibility to re-use connectors)
- + Check the potential at the connection terminals (with a test probe)
- + Guarantee a better fitters safety (electric shock risk limited)

Description

- The box is equipped with 4 connections blocks (1 neutral + 3 phases). The "neutral block" consists of one inlet and 6 outlets (P436) or 9 outlets (P439) ; each "phase block" consists of one inlet and 3 outlets.
- Each box is available in 2 versions : insulation piercing or stripping technology.
- Each connection block is accessible with the contact pin of a test probe.
- The inlet and outlet of the conductors in the lower part are performed by elastomer seal sockets.
- The cover is closed using 2 plastic screws with a captive triangle recess.
- An integrated device allows the assembly to be sealed and possibly padlocked.
- The terminal separators inside the box enable the conductors to be connected in any order.
- The degree of protection of the enclosure is IP43. When the cover is opened, the degree of protection of the live parts is IP2X .
- The box offers fixing solution to the pole with strap or to the façade with screws.

This boxes meet the criteria of the **HN 62-S-33** standard.

Single pole connection block

L436

Application

This overhead single pole block allows to star one conductor into 8 outlets. The use of the 2 blocks enables to realize up to 8 single phase connections. To better distinguish the connected conductor, the block possesses an identification plate. It can be installed on a facade or a pole.

MICHAUD Exclusivity
Patented system

The benefits :

- + Perform several single phase connections
- + Reduce the number of connectors (safer network organization, strengthened fraud-prevention)
- + Clean the network (remove the “spiderweb” effect)
- + Help to identify the phases (thanks to the number plate)
- + Check the potential at the connection terminals (with a test probe)
- + Guarantee the network durability (better resistance to corrosion and humidity)
- + Make the operation easier (thanks to the piercing technology on tap and main conductors)
- + Guarantee a better fitters' safety (electric shock risk limited)
- + Personalize the number of the connections (thanks to the set modularity)

Description

- The 8 outlets connection block is equipped with a single connection block.
- Each terminal is accessible with the contact pin of a test probe.
- The terminal block is made of tinned aluminium, which enable to connect copper or aluminium conductors.
- Each terminal uses insulation piercing technology facilitation the installation.
- The inlets are performed by elastomer seal sockets.
- Part L436 includes one connection block. Part L437 includes 2 connection blocks L436.
- Network tightening screw is made of aluminium and its shear head (size H17) is made of plastic.
- Service tightening screws are made of tinned steel and their shear heads (size H10) are made of plastic.
- Each block has a number plate enabling to easily identify the phases and the neutral (N/1/2/3).
- The product has a nut and M8 screw for mounting on console
- The blocks can be delivered with a metal fixing plate, which is resistant to corrosion*. The plate's rigidity allows the fixing under a non-flate area.
- The degree of protection of the enclosure is IP33.
- Installation can be carried out on a live line but with no load on the tap conductor.

This block meets the criteria of the **HN 62-S-33** and **EN 50483-5** standards.

*Optional

Aerial connection box and network junction

P429
8 service outlets single phase
1 inlet / 1 outlet network
4 connection blocks

MICHAUD Exclusivity

Application

This box enables the junction of 2 overhead networks and the connection of 8 single phase or 4 three phases connections maximum. This box can be fixed either on a facade or on a pole. It can also be used at the network end.

The benefits:

- + Perform single phase or three phases connections
- + Better spread charges on the network, thanks to the connections visibility
- + Reduce the number of connectors (safer network organisation, strengthened fraud-prevention)
- + Improve network readability (removal of the "spider's web" effect)
- + Check potential at terminal block (with a test probe)
- + Guarantee the network durability (better resistance to corrosion and humidity)
- + Easier operation (sliding lid with stop in open mode)
- + Guarantee better fitter safety (electric shock risk limited)
- + Avoid junctions between cables (making false regular cuts)

Description

- The box is equipped with 4 connection blocks. Both network and connection terminals use insulating piercing technology for the **P429** and stripping stripping for the **P426**.
- Tightening is secured thanks to insulated shear head screws (H17/HC8 for network ; H10/H10 for service).
- Each terminal block is accessible with the contact pin of a test probe.
- Conductors inlet and outlet are performed on both sides through an elastomer seal socket with downwards angle.
- The cover is closed using a stainless steel screw. When opened, the cover stands-up, facilitating wiring. An integrated device enables the box to be sealed and possibly padlocked.
- The terminal separators inside the box enable the conductors to be connected in any order.
- The envelope degree of protection is IP33. When the cover is opened, the degree of protection of the live parts is IP2X.
- The envelope can be delivered with a metallic mounting plate *. The plate's rigidity allows the fixing under a non-flate area.
- Installation can be carried out on a live line but with no load on the tap conductor.

This box meets the criteria of the **HN 62-S-33** and **EN 50 483-5** standards.

Network insulation piercing connector

Application

This connector is designed to connect a low voltage A.B.C. (Aerial Bundled Conductors) network to another network of the same type.

Description

Connector general features:

- Insulation piercing is carried out on the main and tap conductors simultaneously.
- The dielectric strength in water is greater than 6kV.
- The tightening screws are potential free.
- Tightening efficiency is ensured by shear head screws.
- Connectors K445, K354 and K446 are fitted with a yellow shear head indicator that disappears when head is sheared-off, being a clear visual confirmation of good tightening from ground level. It increases head height by 10 mm.

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Connector end cap:

- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand.
- It is carrying membranes instead of grease, granting watertightness around tap conductor end on long term basis.
- It is glued on connector body so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).
- It can be equipped with a hard end cap, gripping and covering so, in case rigid cover is required. (Part Number K245: please enquire for further information).

Installation

- Insert the insulated tap conductor into the connector so that its end seats in the flexible end cap. (Note: connector K 381 is delivered without a cap).
- Use a 17mm spanner (13mm for connectors K354, K355 and K356) and tighten the connector on the insulated conductor of the bundle until the shear head breaks.
- The 17mm permanent screw head (21mm for connector K381) is only provided for possible dismantling, and must not be used to re-tighten the screw after the first head has broken.
- Installation can be carried out on a live line but with no load on the tap conductor.

Hexagonal shear head breaks at tightening torque:
- H13/H17 (for K354 - K355 - K356),
- H17/H17 (for K365 - K366 - K445 - K446),
- H17/H21 (for K381)

Connector K356 is manufactured on order: please contact us.

Option: Connector with movable end cap

This connector is used for connecting the insulated service conductors to the low voltage A.B.C (Aerial Bundled Conductors). The movable sealing end cap enables a tap connection on the right or on the left.

The main conductor connection and the tap ones use the insulation piercing technology.

Network insulation piercing connector for bare conductor

K254

K257

K472 - K473
with yellow shear head indicator

K474 - K475
with yellow shear head indicator

Application

This connector is designed to connect a low voltage A.B.C. (Aerial Bundled Conductors) network to another low voltage aluminium alloy or copper bare conductors network.
The section of the bare conductors is from 7 to 240mm² depending on the model.
The section of the insulated cables is from 25 to 150mm² depending on the model.

Description

Connector general features:

- The tightening screws are potential free.
- Tightening efficiency is ensured by a shear head screw.
- Connection on the tap conductors is established using insulation piercing technology.
- Connectors K472, K473, K474 and K475 are fitted with a yellow shear head indicator that disappears when head is sheared-off, being a clear visual confirmation of good tightening from ground level. It increases head height by 10 mm.

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Connector end cap:

- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand.
- It is carrying membranes instead of grease, granting watertightness around tap conductor end on long term basis.
- It is glued on connector body so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).
- It can be equipped with a hard end cap, gripping and covering so, in case rigid cover is required. (Part Number K245: please enquire for further information).

Installation

- Insert the insulated tap conductor into the connector so that its end seats in the flexible end cap.
- Use a 13mm spanner for K254 - K257 or 17mm for K472 to K475. Tighten the connector on to the bare conductor until the shear head breaks.
- The 17mm hexagonal screw head is only provided for possible dismantling, and must not be used to re-tighten the screw after the first head has broken.
- Installation can be carried out on a live line but with no load on the tap conductor.

Network insulation piercing connector
with dismantlable tap contact

On A.B.C

K342

K343

One bare conductor

K376 - K378

K377 - K379

Application

This connector is designed to connect a low voltage A.B.C. (Aerial Bundled Conductors) to another network of the same type or to a low voltage aluminium alloy or copper bare conductors network. In main line, the section of the insulated conductors is from 25 to 150mm² depending on the model, and is from 7 to 120mm² on bare conductors. In tap line, the section of the insulated conductors is from 25 to 70mm² and from 35 to 150mm² depending on the model.

Description

- For the connection of the tap and for the connectors for insulated conductors, the dielectric strength in water is greater than 6kV.
- All of the tightening screws are potential free.
- Tightening efficiency is ensured by shear head screws.
- Connection on the main conductor is established with 1 or 2 shear head screws, depending on the model. This connection can be dismantled but not reused.
- Connection on the tap conductor is established after stripping its end with 1 or 2 shear head screw(s), depending on the model. It can be dismantled and reused.

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Details of the tap contact :

Installation

- Place the connector on the main conductor and tighten using a 13mm spanner until the shear head breaks.
- The 17mm permanent screw head is only provided for possible dismantling, and must not be used to re-tighten the screw after the first head has broken.
- Strip the tap conductor over the recommended length, insert it fully into the bore after brushing it with neutral grease.
- Tighten using a 13mm spanner until the shear head breaks (double screw on K377, K379 and K343).
- If dismantling and reassembling the tap, tighten the screw(s) using a 17mm spanner to the torque indicated on the head: 15Nm.
- Installation can be carried out on a live line but the load on the tap conductor must not exceed 60A.

Parallel groove clamp

U558

Application

These parallel groove clamps are designed to connect a bare aluminium or copper line from another bare aluminium line. They are adapted to outside use.

Description

- These parallel-slotted jaws consist of an upper and a lower aluminum body. The two parts are held together by 2 corrosion-resistant clamping screws.
- The 2 clamping screws ensure optimum connection.
- The jaws have been designed to match the shape of the cables.
- The U559 series jaws are tin-plated, enabling the aluminum/copper lines to be derived.

Street light insulation piercing connector

Application

This connector is designed to connect the street light insulated conductors to the low voltage A.B.C. (Aerial Bundled Conductors).

Description

- Insulation piercing is carried out on the main and tap conductors simultaneously in a single tightening operation.
- The dielectric strength in water is greater than 6kV.
- The tightening screw is potential free.
- Tightening efficiency is ensured by a shear head screw.
- The connector end cap is flexible so that to feel good tap conductor insertion simply by hand. It is glued on connector body or interdependent on watertightness, so that to avoid eventual loss during handling, installation and environment (wind, bad weather...).
- The connector K440 is fitted with a yellow shear head indicator that disappears when head is sheared-off, being a clear visual confirmation of good tightening from ground level. It increases head height by 10 mm.

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Installation

- Insert the insulated service conductor into the connector such that its end seats in the flexible end cap.
- Use a 10mm spanner (for the K326) or a 13mm spanner (for the K439 and K440) and tighten the connector on the insulated main conductor of the bundle until the shear head breaks.
- The 13mm (for the K326 and K439) or 17mm (for the K440) permanent screw head is only provided for possible dismantling, and must not be used to re-tighten the screw after the shear head has broken.
- Installation can be carried out on a live line but with no load on the tap conductor.

Street light set

K416

Application

This street light set is designed to interconnect a network with a street light installation inside a lighting column.

Description

- This set comprises:
 - 4 mechanical sleeves,
 - 1 protective cover.
- The mechanical sleeves are made of brass and accept up to 3 conductors of 10mm². The conductor(s) must be stripped over 17mm before installation. Tightening is ensured by two 4mm hollow hexagonal screws. Each sleeve is covered with a hard transparent synthetic material enclosure providing good protection during and after installation. The sleeves have an IP2X protection degree.
- The protective cover is made of impermeable synthetic materials. It is equipped with a watertight inlet seal on the upper part avoiding water penetration on the connector, and a cable tie on the lower part enabling the enclosure to perfectly fit network cables.

Installation

- 1 Insert the cable from the lighting column through the seal entrance.
- 2 Slide the enclosure upwards.
- 3 Implement the connectors.
- 4 Slide the enclosure down over the connectors.
- 5 Tighten the cable tie around the network cables.

Lighting column

Code	Designation	Weight (kg)	Sales unit
K416	STREET LIGHT SET	0.350	10

Cold shrink end cap

P414

Application

This end cap is designed to ensure street light conductor insulation when fitted at its end. It is mainly used on the bottom of lighting column.

Description

- The end cap is implemented without flame thanks to cold shrink technology.
- Depending on the model, it is made of an end cap with 4 or 5 movable guides enabling for correct conductors insertion.
- The material used is designed to ensure good UV resistance.
- Conductor capacity is 6-16mm² according to the **NF C 32-321** standard.

This product meets the criteria of the **HN 68-S-24** standard.

End installation

1/

- Remove the sheath of the cable over the required length.
- Cut the conductors in a stair shape to facilitate assembly.

2/

- Place the conductors from the longest to the shortest in the open guides.
- Fully insert the end cap.
- Turn over the end cap using the tabs.
- Remove the guides.

3/

- Shape and cut the conductors to the required length.

Service cable dismountable sleeve and connection box

Service cable dismountable sleeve

Application

This service cable dismountable sleeve is designed to establish the connection between the aerial service cable to the customer cable with Al or Cu conductors. This sleeve is used in no mechanical load situation.

Description

- The sleeves K092 and K096 use the insulation piercing technology on the leading-in side (SUPPLY) and the stripping technology on the leading-out side (CUSTOMER).
- The sleeve K091 uses the insulation piercing technology on both sides.
- The dielectric strength in water is greater than 6kV.
- A flexible seal cap maintains the watertightness and insulation level on the stripping terminal in "disconnected" position for K092 and K096.
- The capacity of the terminals is 6-35mm²/16M-50M on the leading-in side (SUPPLY) and 4-35mm²/16M-50M on the leading-out side (CUSTOMER) depending on the models for K092 and K096.
- The capacity of terminals is 4-50mm² on both sides for K091.
- Installation of stripping terminals can be performed under a maximum load of 90A. Disconnection can be performed on a live line but with no load.
- The sleeves K092 and K096 can be assembled in a MCB (Mains Connection Box).
- The permanent hexagonal screw head on the "leading-in" side (SUPPLY), for the K096, allows possible dismantling. The permanent hexagonal screw head on the "leading-out" side (CUSTOMER) allows possible reuse.

This preinsulated sleeve meets the criteria of the **HN 33-S-83** standard.

Installation video available on www.michaud-export.com

Mains Connection Box for dismountables sleeves (MCB for HSC)

Application

This Mains Connection Box (MCB) is installed on the façade of the customer building. It includes service cable dismountable sleeves (HSCs / House Service Connectors) to connect the aerial service cable to the customer premise.

Description

- The boxes equipped with service cable dismountable sleeves are available in single phase or three phase versions.
- The service cable dismountable sleeves accept cable sections between 6 and 35mm² on the "leading-in" side (SUPPLY) and between 4 and 35mm² on the "leading-out" side (CUSTOMER).

Code	Designation	Weight (kg)	Sales unit
K451	SINGLE PHASE MCB + 2 K096	0.380	1
K455	THREE PHASE MCB + 4 K096	0.650	1

Variant: House service connector 4 bolts

This House Service Connector (HSC) with 4 bolts is designed to connect the overhead service line to the electrical installation of the premise. It receives aluminium/copper leading-in and copper leading-out cables, running through two separated chambers. It is installed outside or can be fitted in a no mechanical load situation into a MCB (Main Connection Box).

+ Safe neutral connection

Code	Designation	Network side (mm ²)	Customer side (mm ²)	Weight (kg)	Sales unit
K099	HSC PIERCING 6-35 / STRIPPING 4-35 / 4 BOLTS	6-35	4-35	0.235	5
L307	WHITE SHEAR HEAD SCREW FOR K099			0.016	10

Network preinsulated sleeve
with mechanical tightening

Application

This sleeve is designed to connect aluminium or copper conductors. It does not need the sectoral cores to be rounded before. It is implemented using a 13 or 17mm spanner. The electrical capacity is respectively 240mm² aluminium conductors (K191, K192), 150mm² aluminium or copper conductors (K193) and 95mm² aluminium or copper conductors (K189).

Description

- The dielectric strength in water is greater than 6kV.
- The materials are protected against UV and can be used outside.
- The 95 and 300 types accept round and sectoral sections in a single model.

Preinsulated sleeve E140

K039

Application

This preinsulated sleeve is designed for the connection of copper or aluminium stranded core overhead insulated conductors with traction or with no mechanical load. It is used for the installation, repair or modification of low voltage service lines. The junction can be established between two conductors of equal or unequal sections. All combinations of sections are possible. The section of the cables ranges goes from 6 up to 35mm².

Description

- The sleeve can be used in mechanical traction.
- The sleeve has got an excellent dielectric strength, greater than 6kV.
- The materials are protected against UV.

This preinsulated sleeve meets the requirements of the **NF C 33-021** and **EN 50-483** standards.

Installation

Preparation of the conductors to be connected:

- Cut the cables using a device that does not scratch the core.
- Strip the conductors over a length of 23mm.
- Brush the conductors to be connected using neutral grease to remove the oxide film. Do not wipe the conductors cleaned in this way.
- Insert the conductors fully into the sleeve bores.

Crimping:

- Both conductors do not need to be inserted before crimping. You can insert one, crimp it, insert the second one and crimp it.

Installation video available on www.michaud-export.com

Preinsulated sleeve E173

Phase MJPT sleeve - K110

Neutral MJPT sleeve - K116

Application

This preinsulated sleeve is designed for the connection of insulated conductors of a low voltage overhead network to other ones.
The junction can be established between two conductors of equal or unequal sections. All combinations of sections are possible.
The neutral conductor is dimensioned to withstand tensile strength greater than 1 600daN for the 54mm² section and greater than 2 000daN for the 70mm² section.
The section of the cables ranges from 16mm² to 95mm².

Description

- The sleeve can be used in mechanical traction.
- The sleeve has got an excellent dielectric strength, greater than 6kV.
- The materials are protected against UV.

This preinsulated sleeve meets the requirements of the **NF C 33-021** and **EN 50-483** standards.

Preinsulated sleeve E215

Phase MJPT sleeve - K175

Neutral MJPT sleeve - K185

Application

This preinsulated sleeve is designed for the connection of low voltage overhead insulated conductors to other ones. The junction can be established between two conductors of equal or unequal sections. All combinations of sections are possible. The section of the cables ranges from 95mm² to 150mm². The neutral conductor is dimensioned to withstand tensile strength greater than 1 530daN for the 95mm² and greater than 2 500daN for the 150mm² section.

Description

- The sleeve can be used in mechanical traction.
- The sleeve has got an excellent dielectric strength, greater than 6kV.
- The materials are protected against UV.

This preinsulated sleeve meets the requirements of the **NF C 33-021** and **EN 50-483** standards.

Preinsulated sleeve for aerial sub-surface connection E140

Application

This preinsulated sleeve is designed for the connection of stranded core aerial service cables (aluminium or copper) to aluminium solid core sub-surface service cables. It is also used to connect aluminium solid core service cables to one another. Cable sections up to 25mm² can be connected on the stranded core side and up to 35mm² on the solid core side.

Description

- The sleeve can be used in mechanical traction.
- The sleeve has got an excellent dielectric strength, greater than 6kV.
- The materials are protected against UV.

This preinsulated sleeve meets the requirements of the **NF C 33-021** and **EN 50-483** standards.

Preinsulated lug with mechanical tightening

K575

K576

Application

These preinslated lugs with mechanical tightening are used to connect aerial aluminum or copper conductors, solid or stranded round core, to copper equipment terminals. They are made to be used without mechanical load. They are made of tinned copper which allows compatibility to copper and aluminium. The connection of the conductor is ensured by one or two shear head screws, for optimal tightening.

Michaud Exclusivity

Description

- This lug is made of tinned copper covered with insulation materials.
- The palm is made of tinned copper with a M12 drilled hole at the end.
- The plot for the aerial conductor has got grooves to ensure a direct contact with the core.
- There are joints at the end of the lug and around the screw(s). They enable optimal sealing.
- There is neutral grease under the screw(s).
- The **K575** lug has got one shear head screw. The **K576** lug has got two shear head screws.
- The tightening screws have got H13 head for mounting and H17 head for dismantling.
- These lugs can be implemented after removing insulation of the conductor (stripped length advised on body side).
- These lugs allow medium voltage cables type BLL / BLX.
- A version without dismantling head is available on request

Preinsulated CPTAU lug

Application

This preinsulated lug is designed to connect low voltage overhead insulated conductors to copper equipment terminals. The cable sections range from 16 to 150mm² for the spin-welded terminal lug and 16 to 150mm² for the crimped lug.

Description

Spin-welded terminal lug

This preinsulated lug meets the requirements of the **NF C 33-021** and **EN 50-483** standards.

Crimped terminal lug

This preinsulated lug meets the requirements of the **NF C 33-021** and **EN 50-483** standards.

Installation

Crimping:

- Use a tool equipped with a suitable hexagonal die: E140 (14mm), E173 (17.3mm) or E215 (21.5mm).
- Crimp in the indicated area starting from the centre and going towards the end of the lug.

Bare lug

Tubular lug

Application

This tubular lug is designed to connect cable. It is made of tinplated copper (by electrolysis). It is manufactured with an inspection hole and socketing. This lug is implemented with hexagonal compressed connection. It allows copper and aluminium conductors. This lug meets the requirement of the **NF C 20-130** standard.

Sealing end cap and cover

Sealing end cap

Application

This flexible end cap is designed to ensure insulation of the end of a conductor. It can be used inside and outside.

Description

- The dielectric strength in water is greater than 6kV.
- The body is made of UV resistant black flexible synthetic material.

Heat-shrinkable material

End cap

F111

F112

F110

Application

This heat-shrinkable material is designed for low voltage applications in order to protect conductors and make them watertight. It is characterised by its insulating performances and its high resistivity to pollution and UV. It is retracted by blow torch heating.

Description	
- CRB and CRR caps are designed for conductors only.	
- CRC caps are designed for cables with many conductors.	

Code	Designation	Section (mm²)	Use diameter (mm)	Weight (kg)	Sales unit
FOR CONDUCTORS ONLY					
F110	HEAT-SHRINKABLE END CAP CRB 10-25	10 to 25	6 to 9	0.004	50
F111	HEAT-SHRINKABLE END CAP CRR 16-70	16 to 70	9 to 12	0.008	50
F112	HEAT-SHRINKABLE END CAP CRR 150	150	18 to 23	0.023	10
F116	HEAT-SHRINKABLE END CAP CRR 240	240	23 to 28	0.038	10
FOR CABLES					
F113	HEAT-SHRINKABLE END CAP CRC 16-27		15 to 30	0.024	10
F114	HEAT-SHRINKABLE END CAP CRC 26-48		25 to 45	0.045	10
F115	HEAT-SHRINKABLE END CAP CRC 46-80		32 to 65	0.065	10

End

Description

This heat-shrinkable end is fitted at the end of a single phase or multi-phase junction.

Code	Designation	Section (mm²)	Number of conductors	Weight (kg)	Sales unit
F100	HEAT-SHRINKABLE END E2R 10-35	10 to 35	2	0.015	20
F101	HEAT-SHRINKABLE END E4R 10-35	10 to 35	4	0.035	20
F102	HEAT-SHRINKABLE END E4R 50-150	50 to 150	4	0.047	20
F103	HEAT-SHRINKABLE END E4R 240	240	4	0.095	20

* Compatible with underground cables 240mm² standard NF C 33 210 in version 2014 .

Sheath

Description

This heat-shrinkable sheath is used when neutral and phases have to be insulated. It is delivered in 10m rolls.

Code	Designation	Diameter application (mm)	Section (mm²)*	Weight (kg)	Sales unit
FOR CONDUCTORS					
F120	HEAT SHRINKABLE SHEATH GR 10-35 (10m)	4.5-7.5	1,5-10	0.230	50

Stainless steel strap

Synthetic material winder
20mm

Synthetic material winder
10mm

Application

This stainless steel strap and this range of installation tools is designed to fix the suspension or anchoring clamp brackets on all types of poles (wooden, metal or concrete).

Description

- The strap is made of stainless steel AISI 201, AISI 304 or AISI 430.
- The strap is delivered in a roll inside an easy to handle synthetic material winder.
- The strap edges are deburred.
- The elastomer protection tape for the strap prevents any cable injury if the cable fixed on poles with a strap falls.

This strap meets the requirements of the **NF EN 10088-2**.

Stainless steel strap accessories

SMART buckles

- + The SMART buckle is made of stainless steel
- + This product can be used with a pair of pliers and a hammer
- + Available in two sizes.

Application

This stainless steel buckle can be used without any special tools: a pair of pliers and a hammer are sufficient. Installation is quick and easy. It can be used to fix accessories without tensile strength such as ducts, signage, etc. on all types of poles.

Code	Designation	Compatibility with	Weight (kg)	Sales unit

Neutral messenger network suspension and anchoring

Anchoring assembly

Application

This anchoring assembly is designed for the 1500daN single or double anchoring of A.B.C. (Aerial Bundled Conductors) with insulated neutral messenger of 54.6 and 70mm² sections. It comprises a bracket supporting one or two anchoring clamps.

Description

Anchoring clamp:

- The body is made of aluminium alloy.
- The cleats are made of UV resistant synthetic material. They are captive.
- The stainless steel flexible linking cable is captive. It is equipped with a resistant, insulated and movable saddle.
- Fixing the insulated neutral messenger is ensured by cleats without damaging the insulation.

Anchoring bracket

- The bracket is made of aluminium alloy and permits single or double anchoring.
- Fixing on poles is ensured by one or two 14 or 16mm diameter bolts with suitable washers or using two 20x0.7mm stainless steel straps.

This anchoring assembly meets the criteria of the **NF C 33-041** and **EN 50-483-3** standards.

Installation

- Fix the bracket on the pole using one or two 14 or 16mm diameter bolts with suitable washers or using two 20x0.7mm stainless steel straps.
- Open the A.B.C. where the installation has to be done.
- Slide the cleats backward.
- Insert the neutral messenger between the cleats.
- Push the cleats in the clamp while keeping the neutral messenger in place.
- Anchor the clamp on the bracket.
- Additional tightening is achieved automatically by the cleats.

Code	Designation	Weight (kg)	Sales unit
K306	ANCHORING CLAMP - PA 1500	0.410	20

Suspension assembly

Suspension assembly
ES 1500 (50 - 95mm²): **K277**

Fuse suspension assembly ESF 715
(50 - 70mm²): **K283**

Application

This suspension assembly is designed for suspending the low voltage A.B.C. (Aerial Bundled Conductors) with insulated neutral messenger of 50 - 95mm² sections for code **K277** and 50 - 70mm² sections for code **K283**.

It comprises a movable link system, a suspension clamp and a bracket.

2 standard suspension assemblies are available:

- ES 1500,
- ESF 715 equipped with a fuse element (breaking 715 ± 65daN).

The fuse element can be factory calibrated between 500 and 1 200daN. It is designed to break when an abnormal effort is applied on the A.B.C. The cable drops without causing the pole to break (i.e.: tree falling on to a power line). The cable can be quickly put back in position thanks to the installation of a new clamp on the bracket still in place.

Description

The movable link system and the bracket are delivered in a full set.

Movable link system:

- The body is made of UV resistant, glass fibre reinforced synthetic material and adds insulation between the pole and the cables.
- The design facilitates longitudinal and transversal movement of the suspension clamp body.
- The ESF 715 incorporates the fuse element.

Bracket:

- The bracket is made of aluminium alloy.
- Fixing on poles is ensured by a 14 or 16mm diameter bolt with a suitable washer or using two 20x0.7mm stainless steel straps.

This suspension assembly meets the criteria of **NF C 33-040** and **EN 50-483**.

Code	Designation	Weight (kg)	Sales unit
K277	SUSPENSION ASSEMBLY [50-95] - ES 1500	0.456	20

OVERHEAD / Mechanical fixing / Stainless steel strap

Fully supported network suspension and anchoring

Anchoring clamp

K288

Application

This clamp is designed to anchor the low voltage fully supported A.B.C. (Aerial Bundled Conductors).

Description

- The arms are made of hot-dip galvanised steel. A bolt enables the clamp to be easily dismantled manually and anchored on a bracket fixed to a pole or façade.
- The cleats are made of UV resistant, glass fibre reinforced synthetic material.
- The conductors are attached using a combination of bolts and cleats. Two 17mm sheat head screw allow the control of head break.
- Each conductor runs through a separate channel. The conductors are anchored by distributing the loads, protecting the insulation.
- A large opening facilitates the passage of the conductors between the clamp arms.

This clamp meets the criteria of the **DIN VDE 0211** standard.

Installation

- Unscrew the nuts.
- Open the A.B.C and insert each conductor into one of the channels.
- Screw the nuts alternately using a 17mm spanner until the shear head breaks. The 17mm head is only provided for possible dismantling.
- Anchor the clamp on a hook.
- Additional tightening is achieved automatically by the cleats.

INSTALLATION / LV insulated toolings

Movable suspension clamp

U519

Application

This clamp is designed to suspend the low voltage fully supported A.B.C. (Aerial Bundled Conductors). It is suitable for angles on poles up to 30°.

Description

- The body is made of aluminium, the screws are made of galvanised steel.
- The shear head nut enables to control the tightening of the A.B.C.
- The fastener is captive during installation of the A.B.C. in the body.
- The insert made of UV resistant synthetic material ensures secure holding of the A.B.C.
- The fixing hole on the body is reinforced. It enables the assembly to be installed on a pole or on a façade equipped with a hook.

This clamp meets the criteria of the **DIN VDE 0211** standard.

Installation

- Unscrew the two tightening screws.
- Take out the insert to open the upper body.
- Place the body of the suspension clamp on a hook.
- Put the A.B.C. in the insert.
- Put the insert back in the body of the suspension clamp and screw to hold the A.B.C.
- Screw the nut using a 13mm spanner until the shear head breaks (10Nm).

Service cable anchoring

Service anchoring assembly EA 25

K309

K307 -U500 4x25

Application

This anchoring assembly is designed for fixing low voltage service A.B.C. (Aerial Bundled Conductors) with capacity of 2x16 to 4x25mm². The anchoring clamp is also available in an adjustable hook version.

Description

Anchoring clamp:

- The body is made of UV resistant, glass fibre reinforced synthetic material.
- The wedge is made of UV resistant synthetic material. 4 channels ensure the clamping of 2 or 4 conductors by distributing the loads, protecting the insulation. It is connected to the handle via its integrated link.
- The handle and the hook have good corrosion resistance: stainless steel for K307 and galvanized steel for K309 and U500_4x25.
- The hook can be adjusted once positioned (toothed rack with 10cm stroke).
- All of the elements are captive.
- The tensile strength is 200daN.

F305

L304

Description

Fixing clamp and bracket:

- These elements are made of aluminium alloy.
- The fixing clamp is designed for single anchoring whereas the bracket offers up to 4 fixing points.
- Their specific design allows fixing on wooden, metal or concrete poles.
- The fixing clamp is implemented using a 10mm diameter bolt or using a 20x0.7mm stainless steel strap (tensile strength: 200daN).
- The fixing bracket is implemented using a 14 or 16mm diameter bolt or using two 20x0.7mm stainless steel straps (tensile strength: 200daN/anchoring point).

This anchoring assembly meets the criteria of the **NF C 33-042** and **EN 50-483** standards.

Nota : Bolt or stainless steel strap fastening must be ordered separately.

Low voltage line accessory

Anchoring and suspension clamp

Application

These anchoring and suspension clamps are designed to anchor and to hold the A.B.C. (Aerial Bundled Conductors) network.

This range is rather designed to self-supporting cable.

Description

- These clamps can be used to fix and hold from 2 up to 4 insulated conductors between a pole and a wall or between two poles.
- Admitted conductors capacities go from 16 up to 120mm².
- Clamps body is made of polymer and the metallic parts are made of hot dip galvanised steel.

Cable saddle

Facade fixing

Application

This cable saddle is designed for fixing the low voltage A.B.C. (Aerial Bundled Conductors) on façades using neutral messenger or fully supported technology. A cable saddle is implemented every 30cm to ensure excellent fixing of the A.B.C. The wall mounting is quick and easy to implement. It is discreet and aesthetic.

Description

Cable saddles: Three types of cable saddles are available.

- **BRPF:** cable saddle to be fixed on façades by a nail (12mm Ø hole).
- **BRPV:** cable saddle to be fixed on façades by a screw and dowel pin (12mm Ø hole).
- **BRTV:** cable saddle to be fixed on façades by a reinforced screw and dowel pin assembly (16mm Ø hole).
- The body and cable tie are made of UV resistant synthetic material.
- The opening under the saddle allows the use of an extra tie (not provided) to install a second conductor.
- The cable tie has outside teeth for:
 - Excellent protection of conductor insulation,
 - Excellent fixing of service and network conductors.

This cable saddle meets the criteria of the **NF C 33-040** and **EN 50-483** standards.

Plastic cable tie :

- **CPBF :** plastic service cable tie to be fixed on façades by a screw and dowel pin assembly (M6).
- The body and cable tie are made of UV resistant synthetic material.
- The cable tie enables:
 - Excellent protection of conductor insulation,
 - Excellent fixing of service conductors,
 - Easy installation without tools.

Pole fixing

Application

This saddle is used to fix cable trunking on poles. It is fixed using a strap. It is made of UV protected thermoplastic material. The N733 is sealed with a cable tie for 15 to 30mm diameter cables, the N734 for 30 to 50mm diameter cables, and the N735 for 50 to 90mm cables.

Cable tie

Synthetic material

Application

This cable tie made of black synthetic material is designed to tighten the phase and neutral conductors in order to achieve correct installation. It is used to prevent the conductors from rubbing against accessories such as clamps.

Description

- The cable tie is made of black UV resistant synthetic material.
- The strap has outside teeth for a 9mm width to secure fixing.
- The black UV resistant synthetic material cable tie mounts strap support are suitable for 9mm wide cable ties.
- The knock in wall cable tie mount has a drill hole diameter of 8mm.

Mechanical galvanized bolt and nut

Bolt and nut

U435

Application

These bolts and nuts are designed to fix MV/LV accessories.

Description

- This bolt and nut is made of hot dip galvanized steel class 8.8 for widths lower than 100mm and class 6.8 above.
- These bolts and nuts meet the criteria of the standards hereafter:
 - ISO 4016 / DIN 931
 - Nut ISO 4032 / DIN 934

IPC for MV conductor

BLL/BLX conductor

K251

K250

Application

This I.P.C. (Insulation Piercing Connector) is designed to establish a tap connection from a medium voltage conductor type BLL/BLX (covered overhead conductor) to another BLL/BLX conductor. Connectors **K250** and **K251** can receive conductors section from 50mm² up to 241mm².

Description

- Insulation piercing of the main line and the tap line is carried out simultaneously.
- Contact bridges are studied to pierce an insulation thickness up to 3mm maximum.
- Tightening screws are potential free.
- Tightening efficiency is ensured by shear head screws.
- Connectors **K250** and **K251** can receive respectively main and tap conductors as follows:
 - 50-157/50-157mm²
 - 50-241mm²/50-241mm²
- IPC are delivered with a sealing end cap.

This connector meets the criteria of the **EN 50483-5-6** and **EN 50397-1-2** standards.

Bare conductor

U400

Application

This connector is used to bypass a bare aluminium medium voltage conductor onto another conductor of the same type. Its design allows to work under tension with the help of a operating stick.

Description

- This single piece aluminum alloy connector is highly resistant to corrosion.
- A spring-loaded metal damper provides very good mechanical properties required for pole installation. The design of the damper makes it possible to block the driver once installed.
- The clamping screw, ring type, is provided with a torque limiter that breaks in case of mechanical overload of the ring (> 30Nm). If the torque limiter breaks, the connector can be disassembled using a 13mm hex wrench.
- The capacities* are:
 - Main: 25-95mm² Al
 - Tap: 25-95mm² Al (the derivative conductor can be installed from the top or bottom).

Code	Designation	Main line Al (mm ²)	Tap line Al (mm ²)	Weight (kg)	Sales unit
U400	RING CONNECTOR 25-95 / 25-95	25-95	25-95	0.250	10

* For other sections, please contact us.

Accessories

These two horns are used as a tap conductor to realise a tap connection, a re-supply, a short-circuit or an earthing on BLL/BLX network.

SOLUTIONS FOR NETWORK PROTECTION

For a safe and effective electrical line, MICHAUD offers solutions for the **protection of individual premises** as well as **low voltage network**.

LASTING INSTALLATIONS

As a specialist in low voltage distribution, MICHAUD gets involved in the networks **performance optimisation** and the guarantee of long-lasting electrical lines.

PROTECTED NETWORKS

Thanks to protections installed in **strategic points** on the network or on service level, the power company takes advantage of a better control of faults propagation and an easier maintenance.

CUSTOMIZED PRODUCTS

The technical skills and the right understanding of problematics on the field enable to propose **suitable solutions** for specific demands (customer identification on the product, easy handling, fuse blown indicator...).

Service protection

Two solutions can be used for individual houses protection: the **fuse switch disconnecter** or the **cutout sleeve**. These devices enable a possible cutting point facilitating every interventions for the network manager.

Comparison between	Fuse switch disconnecter	and	Cutout sleeve
Manipulation ease	++		+
	From ground level with a stick		On top pole
Economical solution	+		++

A solution for the protection in underground environment

In order to adapt to various specifications met on the field, a partially and temporarily submersible solution, has been designed to ensure the protection of the underground network connection.

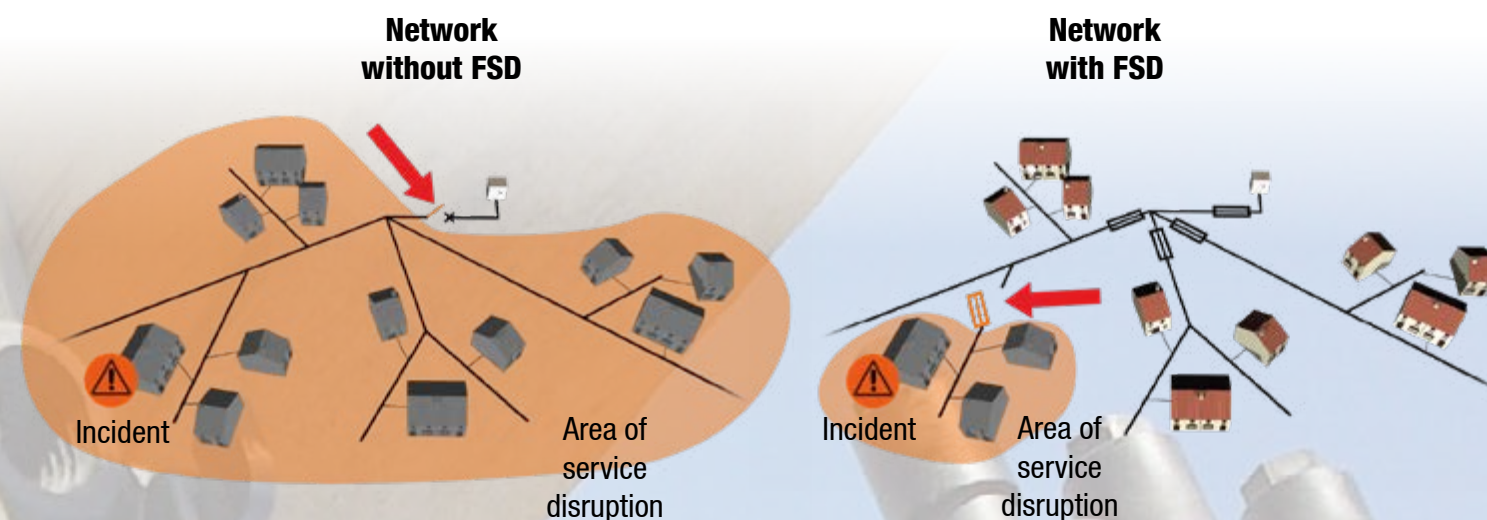

- ✓ Installation in a pit
- ✓ Working temporarily into water
- ✓ Full waterproof connection

Network protection

Low voltage networks are usually **structured in a star shape** from the LV/MV transformer and are not looped. A single short-circuit could therefore make an entire network fail, creating customer service disruptions.

MICHAUD solution: protection on strategic points

- ✓ Control of faults propagation
- ✓ Reduction of customers discontents

+ A suitable earth system device enables the temporary fuse switch protection for work.

Fuse switch disconnecter 100A

K291

Rating 100A
Fuse size 22x58
Conductors section 6-95mm²

Application

This Fuse Switch Disconnecter (FSD) is a single phase device. It is installed at the top of pole or on façade. It protects the overhead connection supplying an individual customer and the low voltage network.
It is designed to receive a neutral tube or a 100A maximum, size 22x58 fuse cartridge (according to the IEC 269-2.1 standard).

Description

- The FSD ratings are:
 - Rated voltage, Ue : 500V
 - Rated frequency : 50 up to 60Hz
 - Rated insulation voltage, Ui : 1 000V
 - Rated current, Ie : 100A
 - The terminals are completely insulated. Connection is established using insulation piercing technology.
 - The insulated conductor section ranges from 6 up to 95mm² Al/Cu.
 - The tightening efficiency of the conductors is ensured by two shear head screws on top body.
 - The fuse holder is opened, removed and closed using a pigtail stick.
- Note: the fuse holder can be installed without fuse.
- The polarity test points are accessible on each terminal without removing the fuse holder.
 - The fuse holder can be sealed if necessary. The protection degree is IP33.

This fuse switch disconnecter meets the criteria of the IEC 60 947-3 and IEC 60 269-2 standards.

Fuse switch disconnecter 100A

K491

Rating 100A

Fuse size 22x58

Conductors section 6-35mm²

Application

This Fuse Switch Disconnecter (FSD) is a single phase device. It is installed at the top of pole or on façade. It protects the overhead connection supplying an individual customer and the low voltage network. It is designed to receive a neutral tube or 100A maximum, size 22x58 fuse cartridge (according to the IEC 269-2.1 standard).

Description

- The FSD ratings are:
 - Rated voltage, Ue : 500V
 - Rated frequency : 50 up to 60Hz
 - Rated insulation voltage, Ui : 1 000V
 - Rated current, Ie : 100A
- The terminals are completely insulated. Connection is established using insulation piercing technology.
- The insulated conductor section ranges from 6 up to 35mm² Al/Cu.
- The tightening efficiency of the conductors is ensured by two shear head screws located on side body.
- The conductors inserting is performed from below.
- The fuse holder is opened, removed and closed using a pigtail stick.
- Note: the fuse holder can be installed without fuse.
- Screw heads and the fuse carrier can be sealed if necessary. The protection degree is IP33.

This fuse switch disconnecter meets the criteria of the IEC 60 947-3 and IEC 60 269-2 standard.

Fuse switch connector 20A

Rating 20A
Fuse size 10.3x38
Conductors section 16-95mm²/
1.5-16mm² depending on the versions

Application

This fuse switch connector is designed to receive a 10.3x38mm fuse cartridge or neutral tube. It is used to protect street light or insulated service conductors connected to the low voltage A.B.C. (Aerial Bundled Conductors) or bare line conductors. It is designed for 20A maximum fuse cartridge. It is used in no mechanical load situations.

The benefit:
+ Unlosable fuse carrier

Description

- Tightening of the bare or insulated main line conductor and piercing on the tap line conductor are carried out simultaneously in a single operation.
- The sealing end cap is flexible in order to check good tap conductor insertion. It can be installed with service cable outlet on left or right side.
- Tightening efficiency is ensured by a shear head screw.
- An elastomer compound ensures insulation during piercing of the conductors to be connected.
- Connection of the fuse cartridge on the tuning fork contacts is ensured using springs.
- The sealable fuse holder is operated easily by hand. Two arrows engraved on the side of the box indicate the opening and closing direction to be followed.
- The protection degree is IP2X during installation. It becomes IP33 after installation on the insulated conductor.

Fuse switch connector 100A

Rating 100A
Fuse size 22x58
Conductors section
35-150mm² / 6-35mm²

Application

This fuse switch connector is designed to receive a 22x58mm fuse cartridge or neutral tube. It is used to protect the insulated service conductors connected to a low voltage A.B.C. (Aerial Bundled Conductors). It is used in no mechanical load situations. Opening and closing of the cutout can be performed under a load of 63A maximum.

Description

- Insulation piercing on the main and tap conductors is carried out independently.
- Tightening efficiency is ensured by shear head screws. The dielectric strength in water is greater than 6kV.
- An elastomer compound ensures insulation during piercing of the conductors to be connected.
- The spring tightening on the cartridge is calibrated so that when the cutout is opened, the cartridge remains on the customer side (therefore without voltage).
- Once the cartridge has been installed, the cutout is locked using the closing ring.
- The closing ring and the 13mm permanent head can be sealed.

Fuse cutout sleeve 100A

Rating 100A
Fuse size 22x58
Conductors section
6-35mm² (K221), 16-35mm² (K219)

Application

This cutout sleeve is designed to receive a 22x58 fuse cartridge, a neutral tube or a mini-switch.
It is used in no mechanical load situations.
It is equipped with mechanical tightening terminals allowing its installation using a simple spanner. Opening and closing of the cutout can be performed under a load of 63A maximum.

Description

- Connection is established using insulation piercing technology for the K221 and stripping technology for the K219. The tightening screws are equipped with shear heads.
- The terminals offer the following capacities:
 - 6-35mm² Al/Cu or 16M-50M Al for the K221,
 - 16-35mm² Al/Cu or 16M-50M Al for the K219.
- The product has a dielectric strength in water greater than 6kV.
- The spring tightening on the cartridge is calibrated so that when the cutout is opened, the cartridge remains on the customer side (therefore without voltage).
- A sealing cap temporarily protects the access on the network side (black on K221 ; grey on K219).
- Once the cartridge has been installed, the product is locked using the closing ring.
- The closing ring and the 13mm screw can be sealed.
- The sleeve accepts 63A fuses. The 100A fuse is only accepted with 35mm² copper wiring.

This sleeve meets the criteria of the **ErDF 69 40 070** French specification.

Code	Designation	Weight (kg)	Sales unit

Fuse insulation piercing pit connector 100A

Rating 100A

Fuse size 22x58

Conductors section 6-50mm²

Application

This Fuse Insulation Piercing Pit Connector (IPPC) is designed to receive a neutral tube, a mini-switch or a 100A maximum, size 22x58 fuse cartridge. It is used to connect a customer service line to an underground conductor. It is installed in a pit and can operate partially and temporary immersed in water. It is equipped with mechanical tightening terminals allowing its installation on a conductor using a simple spanner.

Description

- Terminals use insulation piercing technology.
- Tightening efficiency is ensured by shear head screws.
- The connection is totally watertight.
- The terminals offer a capacity from 6 up to 50mm² Al/Cu.
- On the K199, the elastic tightening of the cartridge is calibrated so that when the connector is opened, the cartridge remains on the customer side (therefore without voltage).
- A sealing cap temporarily protects the access on the network side.
- On the K198, the elastic tightening of the cartridge is calibrated so that when the connector is opened, the cartridge is not in contact with both side. This product is specially design for housing power plant and allows a safe operating. It is IP2X when opening. When it closes, this fuse IPPC is IP67.
- Once the cartridge is installed, the connectors are locked using the closing ring.

Fuse switch disconnecter double pole 160A

Rating 160A**Fuse size NH 00****Conductors section**6-95mm² (K298), 6-120mm² (L278)

Application

This Gang Fuse Switch Disconnecter (Gang FSD) is a multi-phase device. It is installed at the top of a pole or on façade. It protects the overhead connection supplying one or several multi-phase customers or the low voltage circuit of a pole mounted transformer. It is designed to receive 160A fuse cartridges or 240A solid connecting links, size 00 (according to the IEC 269-2.1 standard).

Description

Fuse Switch Disconnecter

- The FSD ratings are:
 - Rated voltage, Ue : 500V
 - Rated frequency : 50 up to 60Hz
 - Rated insulation voltage, Ui : 1 000V
 - Rated current, Ie : 160A
- The FSD K298 uses the insulation piercing technology and receives insulated conductors from 6 up to 95mm² Al-Cu (entry seals are of black colour).
- The FSD L278 uses the stripping technology and receives insulated conductors from 6 up to 120mm² Al-Cu (entry seals are of grey colour).
- The fuse holders are opened, removed and closed simultaneously using a hook stick or a stick to be screwed on the adaptor.
Note: the fuse holder can be installed without fuse.
- The polarity test points are accessible on each terminal without removing the fuse holder.
- The protection degree is IP33.

Bracket

- The bracket is available in 2 holes type. It is made of galvanised steel highly resistant to corrosion.
- Fixing on a pole or façade is achieved by two 10mm diameter galvanised steel screws and two holes on the bracket (top hole having a key shape to make it easier to position the Gang FSD).

This fuse switch disconnecter meets the criteria of the IEC 60 947-3 and IEC 60 269-2 standards.

Code	Designation	Weight (kg)	Sales unit
K298	DOUBLE POLE FSD 160A (NH 00) PIERCING 6-95	1.850	2
L278	DOUBLE POLE FSD 160A (NH 00) STRIPPING 6-120	1.850	1

Note: Fixing with two 10mm diameter galvanised steel screws is provided with the disconnecter.

Costumised solution:

Several options available:

- For the fuse presence indicator, add **P** to the reference.
- For the blown fuse LED indicator, add **L** to the reference.
(Use a NH 00 fuse carrying metal fixing bracket linked to the blade)
- For the shear head indicator, add **H** to the reference.
- For the neutral simultaneous cut, add **S** to the reference.
- For the colour of the fuse carrier, add **C** to the reference and specify the colour (black is standard colour).

Option: Double tap

A double tap is available by adding an end connector with two insulation piercing taps. The conductor section goes from 6 up to 35mm² Al/Cu.

Fuse switch disconnector triple pole 160A

Rating 160A

Fuse size NH 00

Conductors section

6-95mm² (K293), 6-120mm² (L284)

Application

This Gang Fuse Switch Disconnecter (FSD) is a multi-phase device. It is installed at the top of a pole or on façade. It protects the overhead connection supplying one or more multi-phase customers or the low voltage circuit of a pole mounted transformer. It is designed to receive 160A fuse cartridge or 240A solid connecting links, size 00 (according to the IEC 269-2.1 standard).

Description

Fuse Switch Disconnecter

- The FSD ratings are:
 - Rated voltage, U_e : 500V
 - Rated frequency : 50 up to 60Hz
 - Rated insulation voltage, U_i : 1 000V
 - Rated current, I_e : 160A
- The FSD K293 uses the insulation piercing technology and receives insulated conductors from 6 up to 95mm² Al-Cu (entry seals are of black colour).
- The FSD L284 uses the stripping technology and receives insulated conductors from 6 up to 120mm² Al-Cu (entry seals are of grey colour).
- The fuse holders are opened, removed and closed simultaneously using a hook stick or a stick to be screwed on the adaptor.
Note: the fuse holder can be installed without fuse.
- The polarity test points are accessible on each terminal without removing the fuse holder.
- The protection degree is IP33.

Bracket

- The bracket is available in 4 holes type. It is made of galvanised steel highly resistant to corrosion. A hook at its end is used to fix a service cable anchoring clamp.
- Fixing on a pole or façade is achieved by two 10mm diameter galvanised steel screws and two holes on the bracket (top hole having a key shape to make it easier to position the Gang FSD). Fixing on poles can also be carried out using two stainless steel straps thanks to spurs on the bracket.

This fuse switch disconnector meets the criteria of the IEC 60 947-3 and IEC 60 269-2 standards.

Code	Designation	Weight (kg)	Sales unit

Fuse switch disconnecter quadruple pole 160A

Rating 160A

Fuse size NH 00

Conductors section

6-95mm² (K294), 6-120mm² (L281)

Application

This Gang Fuse Switch Disconnector (FSD) is a multi-phase device. It is installed at the top of a pole or on façade. It protects the overhead connection supplying one or more multi-phase customers or the low voltage circuit of a pole mounted transformer. It is designed to receive 160A fuse cartridge or 240A solid connecting links, size 00 (according to the IEC 269-2.1 standard).

Description

Fuse Switch Disconnector

- The FSD ratings are:
 - Rated voltage, U_e : 500V
 - Rated frequency : 50 up to 60Hz
 - Rated insulation voltage, U_i : 1 000V
 - Rated current, I_e : 160A
- The FSD K294 uses the insulation piercing technology and receives insulated conductors from 6 up to 95mm² Al-Cu (entry seals are of black colour).
- The FSD L281 uses the stripping technology and receives insulated conductors from 6 up to 120mm² Al-Cu (entry seals are of grey colour).
- The fuse holders are opened, removed and closed simultaneously using a hook stick or a stick to be screwed on the adaptor (neutral cut-off is performed independantly).
- Note: the fuse holder can be installed without fuse.
- The polarity test points are accessible on each terminal without removing the fuse holder.
- The quadruple pole FSD is equipped with a neutral blade contact size 00 integral with the fuse holder, on the neutral side (independent opening reaches to neutral cut).
- The protection degree is IP33.

Bracket

- The bracket is available in 4 holes type. It is made of galvanised steel highly resistant to corrosion. A hook at its end is used to fix a service cable anchoring clamp.
- Fixing on a pole or façade is achieved by two 10mm diameter galvanised steel screws and two holes on the bracket (top hole having a key shape to make it easier to position the Gang FSD). Fixing on poles can also be carried out using two stainless steel straps thanks to spurs on the bracket.

This fuse switch disconnecter meets the criteria of the IEC 60 947-3 and IEC 60 269-2 standards.

Operating stick

Application

This telescopic operating stick is used to operate a fuse switch disconnecter, remotely from the ground level, but also to check that there is no voltage or for the earthing operations thanks to accessories sold apart. Each model is equipped with a notched universal U-shaped terminal end.

Description

- The stick and the extension comprise 1, 2 or 3 elements.
 - Each element is made of glass fibre composite and has a high mechanical strength.
 - The upper tube is filled with yellow foam to ensure the dielectric strength in the upper part.
 - The hollowed lower tube receives the upper tube, in retracted position. It is entirely treated against humidity through siliconisation (the retracted or deployed position is locked using a push button).
 - The work must be operated, with limited load at the top, with no mechanical stresses (twisting).
 - The assembly can be used for low voltage applications at any time when the stick is deployed.
 - The stick is equipped with the following elements:
 - A U-shaped notched universal end for fixing a suitable terminal end (wing nut equipped),
 - A second end with a mount equipped with a protected connection for the optional extension,
 - A hand grip for secure holding.
 - The stick diameter is 42mm.
 - The stick and the extension can be delivered in a protective cover in order to facilitate handling and storage.
- This operating stick meets the criteria of the **IEC 60855-1**, **IEC 1235** and **EN 61235** standards.

Code	Designation	Elements number	Extension bar application	Length when closed (m)	Length when opened (m)	Weight (kg)	Sales unit

F208	PROTECTIVE COVER FOR OPERATING STICK					0.600	1

Terminal end

Application

To operate a Fuse Switch Disconnecter (FSD) remotely from the ground level, the notched universal U-shaped threaded terminal end is fixed to the operating stick. The F210 end can be used to operate a Fuse Switch Disconnecter manually, without loss of handling thanks to its handle shape.

Fuse cartridge gG

U64x - U65x
Type 22x58

U660
Type 14x51

U661
Type 10.3x38

Application

These gG fuses cartridges are designed to protect goods. They are implemented in a cutout sheltered from outside weather conditions..

Description

- It is type gG HPC (High Breaking Capacity).
- It is not equipped with light indicator.

This fuse meets the criteria of the **NF/EN/IEC 60269-1**, **NF HD/IEC 60269-2**, **NF C 60200-1** and **NF C 60200-2** standards.

For other fuses, contact us.

Fuse cartridge AD

Application

These AD fuse cartridges are used together with the circuit-breaker installed on the individual service tap connection. They perform the cutoff for high short-circuit currents and thereby extend the service life of the associated circuit-breaker, which is not overloaded up to the limit.

Cylindrical cartridge

Description

- This fuse cartridge is available in several sizes: 10.3x38, 14x51 and 22x58mm.
- Many models are available according to the circuit breaker nominal current to which it must be connected: AD 15A, AD 30A, AD 45A, AD 60A and AD 90A.
- Low power loss limits heating of the device holding the fuse and extends its service life.
- It is specified for a nominal voltage of 440V in alternating current with nominal frequency of 50Hz.
- The nominal breaking capacity is 20kA.

This fuse meets the criteria of the **HN62-S-83**, **NF/EN/IEC 60269-1**, **NF HD/IEC 60269-2**, **NF C 60200-1** and **NF C 60200-2** standards.

Note: Other 10.3x38, 14x51, 22x58 fuses can be supplied upon request: please contact us.

Fuse cartridge size 00

Description

- The size of this blade fuse cartridge is 00 according to the **IEC 60269-2-1** standard.
- There are 4 models available according to the nominal current of the circuit-breaker to which it must be connected: AD 30A, AD 45A, AD 60A and AD 90A.
- The fixing brackets are made of insulating synthetic materials.
- The accessible metal parts (screws), with the exception of the blades, are potential free and also have the degree of protection IP2X according to the **NF EN 60529** standard.
- Low power loss limits heating of the device holding the fuse and extends its service life.
- It is specified for a nominal voltage of 440V in alternating current with nominal frequency of 50Hz.
- The nominal breaking capacity is 20kA.

This fuse meets the criteria of the **HN62-S-83** standard.

Fuse cartridge NH

Application

These low voltage fuses cartridges NH00, NH1 or NH2 are type gG. They are used as protection unit of the low voltage public electricity supply networks and works. It is installed in:

- Low voltage switchboards of the public electricity supply substations,
- Cutout boxes, inside or outside supply switches,
- Switch cabinets for subsurface networks,
- Metering boxes and cabinets for different uses.

Description

- The size of this blade fuse cartridge is NH00, NH1 or NH2 according to the IEC 269-2-1 standard.
- It is type gG HPC (High Breaking Capacity).
- It is available in several ratings:
 - 2A, 4A, 6A, 10A, 16A, 20A, 25A, 32A, 35A, 40A, 50A, 63A, 80A, 100A, 125A ou 160A en NH00,
 - 63A, 80A, 100A, 125A, 160A, 200A and 250A for NH1 115mm,
 - 125A, 160A, 200A, 224A, 250A, 315A, 335A and 400A for NH2 115mm,
 - 125A, 200A, 250A and 400A for NH2 160mm.
- It is specified for a nominal voltage of 440V in alternating current with nominal frequency of 50Hz.
- The nominal breaking capacity is 50kA minimum.

SOLUTIONS FOR EARTH SYSTEM

To meet electrical installations safety requirements, MICHAUD specialised in the earth system field.

The earth system

The role of an electrical installation earth system is to enable the fault current runoff into the soil. When an installation is damaged owing to an insulation fault, the current cannot flow correctly anymore. An electric shock occurs, that is to say an element is charging in electricity. At this stage, the current is trying to come out thanks to a conductive environment. This is the aim of the earth system.

Earth system main functions

PEOPLE PROTECTION AND SAFETY

The earth system enables to **protect from the electrocution risk**. It limits the potential difference in the close environment in order to avoid contact or step voltage.

HIGH FREQUENCY CURRENTS DISPERSAL

The earth system also has to **discharge direct or indirect currents** coming from lightning shocks.

GOODS AND EQUIPMENT PROTECTION

It **prevents goods and electrical installations from degradation**. The earth system ensures the electrical continuity and avoids too important voltage to installations terminals.

Components of an earth terminal

The electrical installation earth system is made by an earth terminal or earth circuit. The earth terminal connects the installation and the soil in which the fault current will be able to flow.

The earth terminal consists of three main components:

Connector

Enables connection

Conductor

Discharges current

Electrode

Establishes contact with the soil

The electrode establishes a contact with the soil. It is therefore essential to study the soil in order to better adapt the installation.

Soil study

Earth resistance

The current runoff into the soil will meet the earth terminal resistance. This one is partly the consequence of the soil's resistivity itself.

The soil's resistivity depends on several elements:

- Ground nature
- Water content (humidity)
- Soil heterogeneity
- Climatic variations

A stable and wet ground will enable a better electrical conductivity and earth system effectiveness.

Soil resistivity

The soil electrical resistivity (ρ) is its capacity to limit the electrical current passage, it is expressed in ohm meter (Ωm).

Ground nature	Resistivity ρ (Ωm).
Marshy ground	10
Clay	8 to 50
Clay, sand and gravel	40 to 250
Sand and gravel	60 to 100
Slate, clay and sandstone	10 to 500
Rock	200 to 10 000

SOLUTIONS FOR EARTH SYSTEM

Earth electrode

The earth electrode has to establish a connection with the soil to allow the current runoff. It must guarantee a good conductivity and be adapted to the ground nature.

Deep earth terminal

It is recommended to go deep to find the weakest and the more stable earth resistance. Top layers are submitted to climatic variations so using an electrode able to go deep guarantees to meet stable and homogeneous soil.

Earth rod

Surface earth terminal

When it is not possible to go deep because of the soil nature or the risk of underground network degradation (gas, water, telecoms, etc...), an electrode on the surface turns out to be the best alternative.

Earth plate

The diversity of technics specifications used for earth systems gives the opportunity to find the best solution for every project.

	Rod nature	Conductivity	Service life	Corrosion resistance	Competitiveness	Mechanical resistance
	Copper bonded steel	+++	++	++	++	++
	Stainless steel	+	+++	+++	+	++
	Galvanised steel	++	+	+	+++	++

Earth conductor

The conductor is designed to disseminate the fault current from the equipment or the electrical installation up to the electrode. Two kind of conductors are available: round or cabled conductors and flat conductors or tapes.

Copper conductors

Cables remain the most common technology used in earth systems. For a specific installation or desired properties, tapes offer an alternative to cables (mechanical resistance).

Flat conductors

Copper conductors are generally recommended in earth circuits. Other metallic combinations can bring solutions to existing issues in the field.

Connectors

Connectors must ensure a mechanical bonding between the different elements constituting the earth system to guarantee a good electrical continuity.

Connection conductor/electrode

Connection conductor/conductor

- ✓ Guarantee the system equipotentiality
- ✓ Perform a tap connection
- ✓ Fix the installation up if the conductor has been severed
- ✓ Enable bonding opening to measure earth resistance

Connection A.B.C. conductor/connector

- ✓ Earth system on low voltage A.B.C. network.

Galvanic corrosion phenomenon

A galvanic phenomenon can happen when two metals with different potential are in contact within a conductive solution (such as water). Electron transfer is run from an anode to a cathode leading to a quick degradation of the less noble metal (the anode).

Electrode/connector combinations allowed			
Connector (clamp)	Brass	Galvanised steel	Stainless steel
Electrode			
Copper bonded steel	✓	✗	✓
Stainless steel	✓	✗	✓
Galvanised steel	✗	✓	✓

Conductive solution

Less noble metal (Anode)	Noble metal (Cathode)
--------------------------	-----------------------

Electrons transfer →

All combinations are allowed with a copper conductor.

- ✓ Allowed
- ✓ Tolerated
- ✗ Not allowed

Installation

Tools and accessories

Some tools and accessories can be useful during the earth terminal installation.

Earth rod pushing

For a short rod installation into a wet soil, a hammer can enable pushing into ground.

For rods with more important dimensions, a drill hammer can be used.

Material protection

To protect the rod's copper coat during set up protection, accessories can be placed on both rod ends.

During the rod installation, abrasive elements in the soil can damage the copper coat. On the superior end, hammer blows can lead to copper and rod degradation. A driving spike and a driving head enable to prevent these aggressive effects.

Diverse recommendations

For an effective and reliable earth system:

- ✓ Insulate connections
- ✓ Watch connections locating them in a pit
- ✓ Control regularly the installation and the possible metal corrosion
- ✓ Perform the installation far from buried walls, deep foundations and rivers
- ✓ Do not use water distribution pipes
- ✓ Opt for a substantial depth to reach a stable resistance in a ground not submitted to climatic variations
- ✓ Ensure the system equipotentiality

Earth resistance measure

Preparation and material

The earth resistance measure is performed by an earth tester. In order to allow measurements, the earth circuit can be opened at the cutting blades or at the earth system disconnection kit.

Earth tester

The resistance value to get varies according to normative standards and installations types. The measure should be repeated over some time as the value might change due to a season, measure conditions or soils evolution.

Earth disconnection kit to unbolt

The resistance measurement through the 3 rods method

The measure

The 3 rods method also called 62% method is a way to measure the earth resistance. The measure consists of injecting a current between a first electrode and the earth rod to check. A third rod enables to measure voltage. Thanks to the ohm's law, it is possible to deduce the earth resistance.

Principle

This method implies to use 3 earth rods. One of them (P1) is that staying in the ground after the installation test. The rod (P2) must be placed in more than 10 meters from (P1) and third rod (P3) 62% of the separation distance of (P1) and (P2) in order to be out of the (P1) and (P2) influence area.

1st case:

The measure is not conclusive, the earth resistance value is too high. The rod must be extended or earth terminals must be multiplied taking care of the system equipotentiality in order to decrease value.

2nd case:

The measure is conclusive and it has to be confirmed. (P3) is going to be moved to 52% then to 72% from D1 respectively in P3' and P3''. If the measure does not vary, the value got in the first place is confirmed otherwise please refer to first case.

Copper bonded steel earth rod

F249

Application

This earth rod is used for the power networks earth system. The copper coating made by electrolytic process gives a resistance to corrosion as well as a good conductivity. The reference standard is **EN 62 561-2**.

Copper earth plate and grid

U188

U184

Application

This copper earth electrode is used for the power networks earth system. When a deep installation is not possible, it gives an important contact area with the soil to discharge fault currents. The reference Standard is **EN 50 164-2**.

Code	Designation	Length (mm)	Width (mm)	Thickness (mm)	Weight (kg)	Sales unit
U184	COPPER EARTH PLATE 500x500x2	500	500	2	4.5	1
U185	COPPER EARTH PLATE 500x500x3	500	500	3	6.8	1

Clamp

Description

- Earth plates are delivered with a "U" bolt connection clamp enabling to perform the connection with the conductor.
- Earth grids can receive a "U" bolt connection clamp to perform the connection with the copper conductor.
- The earth grid connection can also be performed thanks to twin-saddle installed on the grid lateral tape.

If you need more informations, please contact us.

Bare copper cable

Earth resistance measure - Earth tester

F439

Application

This earth tester is used as part of the earth system installation. It enables to perform the earth resistance measurements to control the system effectiveness.

Description

- This earth tester is installed in a anti-shock briefcase including three green, yellow and red cords respectively of 5m, 10m and 15m length.
- Cords are provided with a clamp to be placed on rod enabling the measure.
- The tester supply is possible thanks to batteries.
- The recommended surrounding temperature for use is between 0 and 40°C.
- The device is adapted to "2 rods" and "3 rods" measure methods. These methods require the use of backup rods. It is necessary to enable the current circulation between rods in order to perform an earth resistance measure thanks to the earth tester.
- The device keeps in memory the last measure.

The earth tester meets the criteria of **IEC 348** and **IEC 1010** standards.

Code	Designation	Measure range (Ω)	Measure current	Dimensions (mm)	Weight (kg)	Sales unit
F439	EARTH TESTER	0 to 2k	Constant 2mA @ 820Hz	205x90x55	0.550	1

Installation

Measure with the 3 rods method.

Earth connector

"C" tined connector

U001_X-x

Application

These tinned connectors are used to connect grounding conductors. The mechanical and electrical connection is ensured by crimping and allows an efficient aluminum/copper electrical connection.

Code	Designation	Main conductor (mm ²)	Tap conductor (mm ²)	Weight (kg)	Sales Unit
U001_25-10	C TINNED CONNECTOR 10-25 / 2.5-10	10-25	2.5-10	0,04	10

Copper connector

L260

Application

This **copper connector** is designed to fix up an installation in case the conductor has been severed. The **stainless steel fastening** allows the product to be buried. The connector L260 is equipped with a shear head.

Code	Designation	Main conductor (mm ²)	Tap conductor (mm ²)	Weight (kg)	Sales unit
L260	CONNECTOR Cu 10-70 (SF + SH)	10-70	10-70	0.120	50
L261	CONNECTOR Cu 10-70 (SF)	10-70	10-70	0.110	50

Earth system disconnection kit

U031

Application

This **stainless steel kit** comprises two tubular lugs (U030) as well as a nut and a bolt. It is designed to disconnect the earth system in order to perform earth resistance measurements.

Code	Designation	Conductor section min (mm ²)	Conductor section max (mm ²)	Weight (kg)	Sales unit
U030	TUBULAR LUG 25-29	25	29	0.020	50
U031	EARTH SYSTEM DISCONNECTION KIT 25-29	25	29	0.060	20

Ground cutting blade

U034

U035

U036

Application

This cutting blade is designed to open the earth system during earth resistance measurements. It is rather used inside for a residential installation.

Code	Designation	Conductor section min (mm ²)	Conductor section max (mm ²)	Weight (kg)	Sales unit
U034	"T" SHAPE GROUND CUTTING BLADE	10	35	0.180	10
U035	HIGH GROUND CUTTING BLADE	16	35	0.3300	3
U036	LOW GROUND CUTTING BLADE	16	35	0.160	3

Round terminal lug

Application

This copper round terminal lug is used to connect bare copper conductors to copper terminals.

Code	Designation	Cable compatibility (mm ²)	Drill hole compatibility (mm)	Weight (kg)	Sales unit
U018	STRAIGHT CABLE AND ROUND TERMINAL LUGS 10-70	10 to 70	13	0.081	10
U019	STRAIGHT CABLE AND ROUND TERMINAL LUGS 25-120	25 to 120	13	0.207	10

Surge protection device connector

Application

The surge protection device connector (SPD IPC) is designed to protect low voltage overhead lines and electric equipment against over-voltages. It enables the current from the lightning to be led to the ground.

The surge protection device connector includes the following elements:

- An insulation piercing connector,
- A terminal outlet inserted in the end cap of the connector,
- A surge protection device (metal oxide overmoulded with silicone) screwed into the terminal outlet,
- An earth system tail welded to the surge protection device.

The surge protection device reacts:

- After a certain number of over-voltages, when the current passing through the surge protection device increases by more than 1mA,
- In the case of atmospheric discharge (lightning strike), the current exceeding 65mA.

After the surge protection device has performed, the earth system tail physically separates from the connector. The surge protection device then should be replaced with an available spare part (comprising the surge protection device and the earth system tail).

Description

- The connector is used outside only.
 - The maximum use altitude is 2000m.
 - The connector can be used at a temperature going from -40°C to +70°C.
 - The use frequency is 48-62Hz.
 - The connector, the terminal outlet, the surge protection device and the tail are made of UV and flame resistant materials.
 - The connector is equipped with a 0.5m long, 6mm² insulated black multi-stranded tail.
 - The connector protection degree is IP67.
 - The connector has a response time <25ns.
- The surge protection device is Class II as defined in the IEC 61643-1 standard.

Drawing of the connector

Installation

- The location of the surge protection device connection is decided according to the technical specifications and guidelines of the electrical regulatory authorities. These connectors must be installed on all overhead service and network line conductors, the phase(s) and neutral being linked by earth system tails.
- To protect long sections of overhead lines, it is recommended to use at least one surge protection device connector every 500 metres.
- Check that the terminal outlet is inserted into the connector fully and correctly.
- Position the connector on the conductor so that the surge protection device and its tail are directed towards the ground.
- Tighten the shear head until it breaks using a 13mm spanner. The 17mm head is only provided for an eventual dismantling. Do not use it to re-tighten.
- When the surge protection device connector has been used, protecting the power line against high voltages, the earth system tail is automatically disconnected from the base of the silicone cylinder. A new surge protection device, available as a spare part, must replace the old one. To do this, unscrew the old part of the silicone surge protection device from the terminal end and screw in a spare surge protection device, join all of the earth system tails together and link them to the earth.

Characteristics:

Code	Designation	I _{max} Maximal discharge current (kA)	U _c Continuous operating voltage V(AC)	I _n Nominal discharge current (kA)	U _p Protection level at I _n

Insulation piercing connector for measure and short-circuiting

Connector CMCC/CT

Application

This I.P.C. (Insulation Piercing Connector) is designed for short-circuiting or earthing the low voltage A.B.C. (Aerial Bundled Conductors). It is also used to perform voltage measurements. It comprises the connector and the socket.

Description

- Connection is established through the insulation piercing technology.
- Dielectric strength in water is greater than 6kV.
- Tightening screw is the only accessible metal part and is potential free.
- Tightening efficiency is ensured by shear head screw.
- The end socket is protected by an integral cap preventing the water penetration and corrosion.

This connector meets the criteria of the **NF C 33-020** and **EN 50-483** standards.

Socket PMCC
K368

Code	Designation	Capacities Main insulated Al-Cu (mm²)	Weight (kg)	Sales unit
ZINC-PLATED STEEL FASTENERS (ZF)

Earth system and short-circuiting device

Short-circuiting devices

6 sockets
K008

Application

This device is designated for short-circuiting and earthing the low voltage A.B.C (Aerial Bundled Cinductors). It is connected to a connector for measures and short-circuiting (type CMCC).

Description

- This device comprises 6 or 7 insulated sockets closing with bayonet system on the CMCC connector tap socket.
- Connection between the sockets is established with a 25mm² flexible copper conductor for the K008 and K009 references and 16mm² for the K016.
- The electrical characteristics are:
 - Short-circuiting capacity: 4000A during 1 second.
 - Permanent current capacity: 200A.
- The device is packed in a carrying case.

K009	SHORT-CIRCUITING EQUIPMENT 7 SOCKETS	3,000	1

Nota : The K009 (7 sockets) is used for strett light.

Earth system equipment

K006

Application

This equipment is used to perform the earthing of a low voltage A.B.C (Aerial Bundled Conductor).

Description

- This equipment comprises the following elements:
 - Earth clamp
 - 10m long 25mm² copper insulated flexible conductor
 - Insulated socket closing with a beayonet system CMCC connector tap socket.
- The flexible copper conductor is available in lenght 10m for the sectionof 16mm² (K006-16_10) or 25mm² (K006) and 15m for the section of 16mm² (K006-16_15).
- The electrical characteristics are:
 - Short-circuiting capacity: 4000A during 1 second.
 - Permanent current capacity: 200A.
- The equipment is packed in a carrying case.

EARTH SYSTEM / Earth electrodes

Switch earth system and short-circuiting device for Gang FSD

K010

Application

This device is designed for short-circuiting and earthing the low voltage A.B.C. (Aerial Bundled Conductor). It is connected to the MICHAUD 3-poles type pole-mounted Gang Fuse Switch Disconnecter (Gang FSD).

Description

- The short-circuiting of the Gang Fuse Switch Disconnecter poles is carried out using a tinned metal comb bar. This bar can be seen from the bottom of the pole which constitutes a visual indicator of the short-circuiting of the poles.
- A safety hook made of synthetic material ensures correct closing of the bar holder on the body of the Gang fuse switch disconnecter. The load related to the weight of the copper cable is offset towards the bar rotational axis via the presence of a metal bar. This assembly prevents the device from being opened when the operator pulls on the cable.
- A 2.5m long 35mm² copper cable with transparent insulation is fixed to the metal bar using a terminal lug. The other end of the cable is linked to the earth system clamp.
- The short-circuiting capacity is 9kA maximum over 500V.
- The device is delivered in a case ensuring safe transport and storage.

Installation

Fuse switch disconnecter earthing

Replacement of the copper cable

The copper cable with transparent insulation and earth system clamp can be damaged during careless handling. Therefore, it should be replaced to ensure correct use of the device in complete safety. For this, dismantle the existing cable and replace it with a new MICHAUD model by screwing the terminal lug on the metal bar of the device.

Tape

U088

U094

Application

This tape is designed to conduct the electricity into the earth system and to guarantee the default current runoff. If the copper gives an important electrical and the tinned coating protects from theft thanks to the non visible copper coating conductivity. The copper bonded steel offers a good economical alternative to copper. Furthermore Galvanized steel is an economical solution to coppered tinned steel and protect from the theft too. It has a good conductivity.

Ground cutting blade
aluminium with box
N106

Earth distributor 6 taps
Q979

Aluminium earth cable
Q984 - Q985 - Q986

35-25 Al-Cu earth adaptor
P340

Application

The earth distributor is used to connect floor earths between themselves. It is installed in a building pillar according to applicable specifications. The ground cutting blade is installed at the bottom of the earth pillar. It enables the earth system opening during an earth resistance measurement.

Benefits:

- + Aluminum terminals admitting copper or aluminium cable
- + Reversible box cover protecting the ground cutting blade
- + Earth distributor designed for an esthetic installation in 60x60mm conduit in case of renovation

Description

- The earth distributor can receive:
 - 1 cable **50mm²** maximum without cutting (main line)
 - 6 possible taps 35mm² maximum
- It comprises an aluminium profile with shear head screws and insulation piercing and a box in synthetic materials giving it a protection degree type IPXXB.
- It is equipped with a handle offering a possible sealing.
- The ground cutting blade with box is equipped with:
 - An insulation piercing superior terminal block in tinned aluminium with shear head screws (no need of stripping)
 - A copper blade
 - An inferior terminal block in brass
 - A synthetic materials box with reversible opening and closing way, giving it a protection degree type IP44D
- It can receive **aluminium cable section from 25 up to 50mm²** and **copper cable section from 16 up to 35mm²**.
- The distribution board adaptor Al/Cu comprises:
 - A flexible tail 25mm², length 230mm
 - A shear head screw
- It can receive cable sections from 25 up to 35mm²
- Its use is requested for the connection of the individual protection connector and the earth terminal block of the distribution board, when this one cannot receive aluminium.
- The earth cable FR-N-07V-AR is made of aluminium. It is delivered in ring with 2 straps making transportation easier and a box of 25 identification labels marked "Alu".
- It is available in 3 sections: 25, 35, 50mm².
- It meets the requirements of **NF C32-208**.

SOLUTIONS FOR UNDERGROUND NETWORKS

With a solid experience acquired in insulated cables connections, MICHAUD expanded its skills to **the underground field**.

The company developed the underground field, based on its **skills acquired** in insulation piercing technology demonstrating **high innovation ability**.

The underground field requires a high level of reliability. Mistakes during installation can be expensive and MICHAUD reduces risks with **high technical equipment** and establishes itself as a leader of buried connections.

This field matches with **new applications** such as the three-phase supply, electrical cars load, air conditioners designing solutions suitable for higher power conductors.

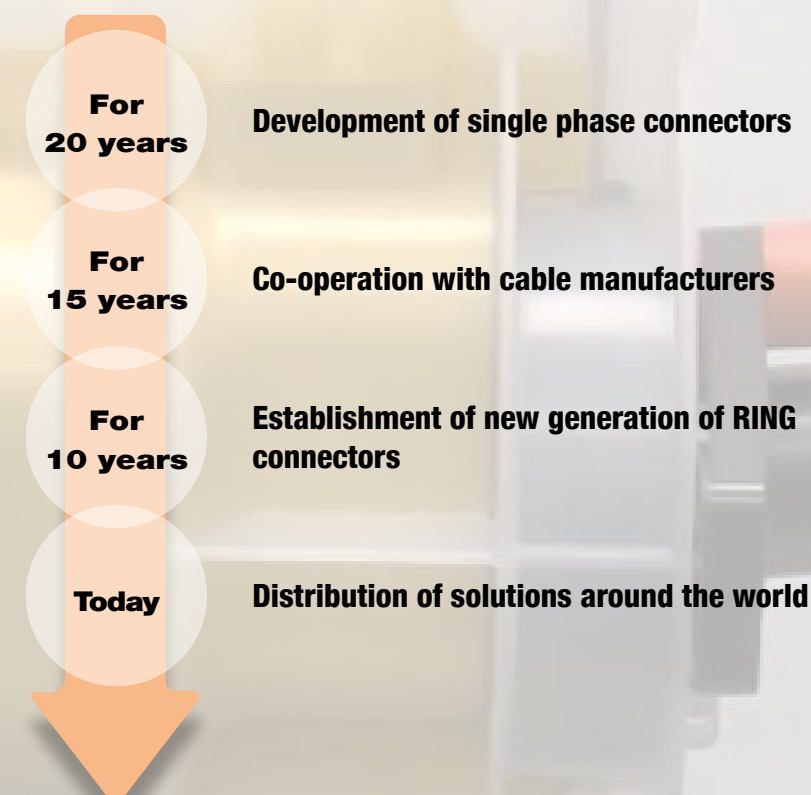

Underground networks

Many assets

The use of underground technology is growing. Buried networks offer many benefits compared to overhead ones.

A recognized experience in the sector

SOLUTIONS FOR UNDERGROUND NETWORKS

Three levels of installations

1 - Buried solutions

To enable the achievement of connections and tap-connections in underground environment, MICHAUD designed watertight systems avoiding water penetration being able to run over 30 years without maintenance.

Zoom on RING connector and the underground service box

2 - Half-buried solutions

These solutions give the advantage to follow the requirements due to an operation in underground environment while being accessible from the soil surface.

Zoom on the pit cutout sleeve

This sleeve enables the protection of the underground network connection.

- ✓ Installation in a pit
- ✓ Full waterproof connection
- ✓ Temporary working into water

3 - Emerging connection solutions

The modular range of emerging cabinets makes possible an adaptation to different searched configurations.

1 - Cabinet

2 - Set of bars

3 - Modules

- ✓ Service / Network
- ✓ Single phase / Three phases
- ✓ One outlet / Several outlets
- ✓ Fuse protection

Set of bars and modules are suitable to every type of cabinets in order to insert inside the environment, keeping the existing.

In order to better suit the market expectations, **MICHAUD** encourages co-development.

+ Soft dismountable non hazardous resin is also available

Multipole ring connector 150mm²

K449

Application

This RING connector is designed to establish a tap connection on low voltage underground networks. It is installed inside an underground box. It is used on a main cable with synthetic insulation of type:

- Circular or sectoral,
- Copper or aluminium,
- Solid or stranded core.

Description

- Connection is ensured through insulation piercing technology, simultaneously on main and tap lines.
- Connector capacities are 95 to 150mm² main and 1x10 to 35mm² tap.
- The connector accepts a reduced neutral.
- Adjustable clips are used to guide the cable and act as stops. The tap can be established on the right or left.
- The connector comprises:
 - 2 identical IP2X tightening modules enabling non-oriented mounting and simultaneous tightening from the top.
 - 1 cleat for locking the modules and for permanently securing the connector on the cable.
- The body is made of synthetic materials to make live-line work safe.
- The ergonomics has been designed to meet the specific constraints of underground work.
- Tightening efficiency is ensured by 2 shear heads, thereby reducing the assembly time.
- All connector components are captive to make the installation easier.
- The connector dimensions once implemented: Ø ≤ 119mm.
- IP2X connector once implemented.

This connector is tested according to the **DIN VDE 0220** and **DIN EN 50393** standards.

Underground box

K450

Utilisation

This underground box enables the tap connection from an underground network. It makes possible the tap connection of every conductors type (stranded, solid, multi-stranded, round or sectoral). It comprises the connector, the resin, the box and accessories according to the local standard.

Description

- The box comprises a translucent shell made of thermoplastic material (PP).
- Box accessories required for the assembly are supplied: section reducer, strips of adhesive foam, foams, links, gloves, etc.
- The polyurethane resin, delivered in a dual-bag, is qualified according to the **NF C33-010** (MPF01/DC and MPF PM) and **HD631.1** (LMPW, LIN, MMPW, NIW) standards.
- Once implemented, the dimensions of the box are 380x180x150mm.
- The connector shapes are studied to perform a good display of the resin.

The underground box is tested according to the **DIN EN 50393** standard.

Multipole ring connector 240mm²

MICHAUD Exclusivity
Patented system

K459

Application

This RING connector is designed to establish a tap connection on low voltage underground networks. It is installed inside an underground box. It is used on a main cable with synthetic insulation of type:

- Circular or sectoral,
- Copper or aluminium,
- Solid or stranded core.

Description

- Connection is ensured through insulation piercing technology, simultaneously on main and tap lines.
- Connector capacities are: 50 to 240mm² main and 1 up to 2x10 to 35mm² tap.
- The connector accepts a reduced neutral.
- Adjustable clips are used to guide the cable and act as stops. The tap can be established on the right or left.
- The connector comprises:
 - 2 identical IP2X tightening modules enabling non-oriented mounting and simultaneous tightening from the top.
 - 1 cleat for locking the modules and for permanently securing the connector on the cable.
- The body is made of synthetic materials to make live-line work safe.
- The ergonomics has been designed to meet the specific constraints of underground work.
- Tightening efficiency is ensured by 2 shear heads, thereby reducing the assembly time.
- All connector components are captive to make the installation easier.
- IP2X connector once implemented.

This connector is tested according to 1 000 cycles electrical ageing according to the **EN 61 238-1** standard.

Code	Designation	Main Capacities (mm²)	Tap Capacities (mm²)	Weight (kg)	Sales unit
K459	4 POLES SERVICE CONNECTOR 240 / 2x35	50-240	2 x 10-35	0.820	8

For compatibility with your conductors, please contact us (cable compatibility shall be tested before use).

Accessory

This kit comprising a cable and a blue synthetic sheath is used as a complement to the K459 to ensure earth system of the multitap connector.

The insulated wedge separator is used for installing the multitap connector. It is used to separate the conductors.

Multipole ring connector 300mm²

K642

Application

This RING connector is designed to establish a tap connection on low voltage underground networks. It is installed inside an underground box. It is used on a main cable with synthetic insulation of type:

- Circular or sectoral,
- Copper or aluminium,
- Solid or stranded core.

Description

- Connection is ensured through insulation piercing technology, simultaneously on main and tap lines.
- Connector capacities are 240 to 300mm² main and 1 up to 2x10 to 35mm² tap.
- The connector accepts a reduced neutral.
- Adjustable clips are used to guide the cable and act as stops. The tap can be established on the right or left.
- The connector comprises:
 - 2 identical IP2X tightening modules enabling non-oriented mounting and simultaneous tightening from the top.
 - 1 cleat for locking the modules and for permanently securing the connector on the cable.
- The body is made of synthetic materials to make live-line work safe.
- The ergonomics has been designed to meet the specific constraints of underground work.

Single pole service connector

Phase - K317

Neutral - K318

Phase - K419

Neutral - K420

Application

This connector is designed to establish a tap connection on low voltage underground networks.
It is located in underground cast or injected boxes.
It can be used on a main cable with paper or synthetic insulation of type:
- circular or sectoral
- aluminum
- stranded or solid core.

Description

- Connection is ensured through insulation piercing technology simultaneously on main and tap lines.
- The K419 and K420 models can be used for connecting 2 taps with identical or different sections.
- The K420 model integrates an earth system conductor.
- Connectors are fully insulated (IP2X protection degree). Bodies are made of synthetic materials to make live-line work safe.
- The ergonomics has been designated to meet the specific constraints of underground work.
- Tightening efficiency is ensured by a shear head screw.

The components are tested for 200 cycles according to the NFC 63-061 and 1000 cycles electrical ageing according to the NF EN 61238-1 standards.

Service repairing junction kit - JRB

BE004

Application

This accessory is designed to repair connection of service underground damaged cables.

Description

- This kit comprises the following accessories:
 - 4 pre-insulated junction sleeves using insulation piercing technology,
 - 1 device enabling the reconstitution of the cable screen,
 - 1 hardening resin.
- The installation is of ribboning / injection type.

Installation

- Cables preparation
- Cables connection
- Ribboning
- Resin injection

K313

Neutral 50-150 / 50-95
K360

Application

This connector is designed to be used with underground low voltage network for tapping or junction applications. It is implemented in underground cast or injected boxes. It can be used on aluminium, circular or sectoral type cables with paper or synthetic insulation.

Description

- Connection is established simultaneously using insulation piercing technology on the main and tap lines.
- The connectors are fully insulated (IP2X degree of protection). Their bodies are made of synthetic materials to make live-line work safe.
- They are tested for 1 000 cycles electrical ageing according to the **NF EN 61238-1** standard.
- The dielectric strength in air is greater than 4kV.
- The ergonomics has been designed to meet the specific constraints of underground work.
- Tightening efficiency is ensured by shear head screws.

These connectors meet the criteria of the technical specification **HN 68 S-12**.

BD010

Application

This sleeve is used to perform junctions of low voltage underground cables. Sleeves use mechanical tightening enabling to cover a wide range and to ensure an easier installation. To guarantee the junction sealing, two technologies are available: cold and heat-shrinkable sheaths.

Description

- Junction sleeves are made of tinned aluminium enabling the compatibility with aluminium and copper cables.
- The shear head tightening ensures an optimized electrical contact and a sleeve shape suitable to the heat-shrinkable sheath covering.
- Sleeves offer a central stop and ensure a water barrier because of non-through piercing.
- The cable range sections are from 50 up to 240mm².

Sleeves meet the criteria of the EN 61 281-1 class A standard.

Cold shrinkable

Cold shrinkable sheath

Utilisation

This accessory is designed to short-circuit waiting networks without power.
It is used to warn accidental powering at one end.
It ensures cables watertightness.

The benefit:
+ Easy installation

Description

- This kit comprises the following accessories:
- 1 short-circuiting bare connector with mechanical tightening,
 - 1 neutral sheath to cold slide,
 - 2 cold shrinkable ends.

Installation

- Cables preparation.

- Cable re-insulation.

- Conductors short-circuiting.

- Accessory reinforcement.

REMIC bare cabinet

U703

- + 180° opening door
- + Modular

Application

DIN cabinets exist in 3 widths and are designed to receive a 300, 450 or 600mm REMIC set of bars support. They use "common" equipment (direct connection network, service) and RRCP cutting / protection network connection modules. They are also designed for possible re-supply of the set of bars support without additional re-supply doors.

Dimensions

U701

U702

U703

Dimensions in mm

Code	Designation	Weight (kg)	Sales unit
U701	DIN CABINET FOR REMIC SET OF BARS 6 STEPS	15.000	1
U702	DIN CABINET FOR REMIC SET OF BARS 9 STEPS	18.000	1
U703	DIN CABINET FOR REMIC SET OF BARS 12 STEPS	20.000	1

All of the references are available in remote meter reading system or with flash marking; please contact us.

Description

- These cabinets are made for outdoor use. They are IP44 and IK10.
- These DIN cabinets have a V0 flammability category.
- They are equipped with inserts for receiving the REMIC sets of bars supports.
- The are available in 3 versions, depending on the type of bars supports needed.
- Cabinet's doors can be open at 180° which facilitate implementation, operation and maintenance.
- The monobloc front face is completely removable to facilitate connection inside the cabinet.
- The plinth is used to adapt the above ground height of the cabinets.
- A re-supply trapdoor is included in the cabinet.
- The cabinets are delivered with their fixing foundations. However, these are not supplied with the sets of bars and their support.
- These cabinets meet the criteria of EN 62208:2011.

REMIC set of bars

Set of bars 300
Q600

Set of bars 450
Q601

Set of bars 600
Q602

Application

The sets of bars supports 300, 450 and 600 respectively offer 6, 9 and 12 connection terminals for each pole.

Description

- The sets of bars supports 300, 450 and 600 are respectively made of 6, 9 and 12 steps of 50mm.
- The set of bars support is fixed to the bottom of all REMBT cabinets on standardised inserts.
- The inclination of the phase bars facilitates connection.
- The poles are identified (N, L1, L2, L3).
- The modules are fixed using standardised M12 threads.
- The product is IP2X before and after installation. The unused connection terminals are covered using a captive cap.
- A 400A re-supply device can be connected directly to the connection terminals. IP2X is maintained thanks to the 35mm diameter of the terminals.

These sets of bars supports meet the criteria of the **HN 63-S-65** standard.

Q619	REMIC STANDARD S15 CABINET FRAME	1.550	1

REMIC service module

Fuse module

Application

The fuse service module exists in 60A and 90A available in single or three phase kits depending on the model. In variation of the fused neutral, a triple neutral is possible. It is installed on the M12 standardized connection terminals of the set of bars support. It is used to tap a single or three phase service connection ensuring protection through fuses size 00.

The benefit:

+ In case of long service connections, the terminal can receive 50M solid core to avoid voltage drop.

Description

- The fuse service module has a protection degree type IP2X before and after installation.
- The neutral is identified thanks to its blue colour.
- The connection terminals use insulation piercing technology and are equipped with shear head screws. Capacity is 10-25mm² Cu / 16M-50M Al (the letter M means that the core of the conductor is solid).

This module meets the criteria of the **H 63-S-65** standard.

Dimensions in mm

Code	Designation	Number of phase modules	Neutral type module	ENEDIS capacity (A)	Real capacity (A)	Weight (kg)	Sales unit
Q608	REMIC MODULE TYPE FUSE SERVICE SINGLE PHASE 90A RBPM	1	Disconnection	90	108	0.590	1

Q611	KIT MODULES FUSE PHASES + TRIPLE NEUTRAL G2	3	Triple neutral	60	72	0.100	1

SEE SHEET
PROTECTION / Fuses / Fuse cartridge AD

Multitap module

Application

The multitap connection module comprises 1 neutral and 3 phases. It allows a maximum of 3 single phase or 3 three phase services to be connected. It is installed on the M12 standardized connection terminals of the set of bars support. It is mainly used when the AD fuses are installed in the customer premises.

The benefit:

+ In case of long service connections, the terminal can receive 35M solid core to avoid the voltage drop.

Description

- The multitap connection module has a degree of protection type IP2X before and after installation.
- The neutral and phases have 3 insulation piercing connection terminals.
- The neutral is identified thanks to its blue colour.
- The terminals are equipped with shear head screws. Capacity is 16-25mm² Al-Cu / 16M-35M Al (the letter M means that the core of the conductor is solid).
- The product design allows the conductors to be wired on the top of the lower terminals.
- The small size of the IP2X caps provides access to the tightening screws of the terminals even when all of the conductors are connected.

This module meets the criteria of the **HN 63-S-65** standard.

Dimensions in mm

Code	Designation	Weight (kg)	Sales unit
Q607	REMIC MULTITAP CONNECTION MODULE RBD (1 NEUTRAL + 3 PHASES)	0.950	1

Variant:

The multitap connection module is available in single phase version.

Code	Designation	Weight (kg)	Sales unit
Q610	REMIC MULTITAP CONNECTION MODULE SINGLE PHASE (1 NEUTRAL + 1 PHASE)	0.580	1

REMIC network module

Application

The network module is available in 2 versions:
- 50-240mm²,
- 50-150mm².
It comprises one neutral terminal and three phase terminals.
It is installed on the M12 standardized connection terminals of the sets of bars supports.

Q603: Network module 50-240

Q612: Network module 50-150

The benefits:

- + Easy installation of the NETWORK module 50-240.
- + 50mm² or 95mm² connection on a terminal of the NETWORK module 50-150.

Description

- The terminals are of Class A according to the **NF C 63-061** standard (Electrical ageing: 700 cycles).
- They are IP2X before and after installation regardless of the conductors section.
- The neutral is identified thanks to its blue colour.
- The terminals receive round or sectoral shape aluminium or copper conductors.
- The conductors are tightened using a hexagonal H14 shear head screw. A second H14 head is used for possible dismantling and reuse using a 40Nm torque wrench.

This module meets the criteria of the **HN 63-S-65** standard.

Installation

PRINCIPLE

- For all cable sections
Install the network module on two 50mm steps. The design of the set of bars supports allows one or the other of the configurations besides.

- For the cables with sections up to 95mm²
The network module 50-150 can be installed on only one step.

CHRONOLOGY OF THE OPERATIONS

- For the 50-240 module

1° Fixing of the module to the set of bars support (tightening at 30Nm).

2° Moving the **captive** slide of the module to the top so the conductor can be grasped from the front.

3° Tightening of the conductor until the shear head breaks after bringing the upper part of the terminal back to the bottom.

- For the 50-150 module

The principle is the same except the fact that the slide of the terminal does not have a retention system in the upper part (the slide is installed and removed from the front).

Code	Designation	Weight (kg)	Sales unit
Q603	REMIC MODULE TYPE NETWORK RRD 50-240 (1 NEUTRAL + 3 PHASES)	1.780	1
Q612	REMIC MODULE TYPE NETWORK RRD 50-150 (1 NEUTRAL + 3 PHASES)	1.670	1

Accessory

The insulation bloc module enables a network module to be temporarily separated from the set of bars support and possibly resupplied.

This module meets the criteria of the **HN 63-S-65** standard.

Code	Designation	Weight (kg)	Sales unit
Q604	REMIC 4-TYPE INSULATION BLOC MODULE	0.668	1

REMIC disconnection and protection module RRCP

Q614

Application

The REMIC module type RRCP offers a network outlet that can be cut (400 A function) or protected using maximum 200A fuses 115mm size 2 (200A function).
It is installed on the M12 standardised connection terminals of the sets of bars supports.
It is mainly used for supplying a collective or individual service with supervised power.

The benefits:

- + 1 single tool for installation
- + Compatibility with flat doors
- + Clear poles separation
- + Integrated IP2X protection on each pole

Description

- The small thickness of the new generation of module type RRCP facilitates use in small depth cabinets (flat door).
- The neutral is identified thanks to its blue colour.
- The terminals allow the connection of round or sectoral shape, copper or aluminium conductors.
- The capacity of the terminals is 50 to 240mm² for the neutral and for the phases.

This module meets the criteria of the **HN 63-S-65** standard.

Caution: the RRCP module is installed exclusively on REMIC sets of bars supports.

Installation

PRINCIPLE

A disconnection and protection module (RRCP) requires four 50mm steps.

● : Fixing points on the set of bars support

CHRONOLOGY OF THE OPERATIONS

ASSEMBLY

- On the set of bars supports installed (450 or 600), open the 4 poles diagonally in the required place for installing the RRCP (the other captive caps above and below the diagonal must remain closed).
- Remove the IP2X captive caps then place and fix the RRCP on the set of bars support using 4 H16 screws.
- Replace all of the captive caps while waiting connection of the outlet.

LEADING-OUT WIRING

- Prepare end cable as usual.
- Remove the covers of the terminal blocks to connect.
- Cut the conductors to length, strip them over 45mm, brush them with neutral grease then insert them into the terminals.
- Replace the slides in U shape and tighten the screws until 40Nm.
- Replace the covers.

INSTALLATION OF THE BARS OR FUSES SIZE 2 (CENTRE-TO-CENTRE DISTANCE 115mm)

- Install the links or fuses using an insulated operating handle.

INSTALLATION OF THE RE-SUPPLY

- Remove the 4 re-supply covers.
- Perform necessary electrical measurements.
- Insert and screw the M12 re-supply socket.

Code	Designation	Weight (kg)	Sales unit
Q614	REMIC MODULE RRCP 400A / 200A	5.658	1

Variation:

The ERDF technical specification also defines a product known as RRC exclusively dedicated to the 400A cutout. For Michaud this is exactly the same product.

Code	Designation	Weight (kg)	Sales unit
Q613	REMIC MODULE RRC 400A	5.658	1

Application

The tool set **U804** provides various tools required for the connection of the underground incoming and outgoing cables to the REMIC emergency junction box.

Description

The tool kit U804 contains the following accessories :

- Insulated handle for installing and removing fuses and neutral knives. (**P237**)
- Square flat triangle operating key to open/close the front part of the emerging junction box(**P091**)
- 3/8" Insulated torque wrench (**U814-4**)
- Insulated extension for torque wrench (**U801**)
- 3 sizes of insulated hexagon sockets for the torque wrench (**U803-1X**) :
 - 10mm (**U803-10**)
 - 13mm (**U803-13**)
 - 14mm (**U803-14**)
- 2 sizes of allen sockets for the torque wrench (U803-XA) :
 - 6mm (**U803-6A**)
 - 4mm (**U803-4A**)

Protection and warning

Protection plate roll (PPR)

Application

This protection plate roll (PPR) is designed to protect underground networks from extraction (pipes and/or cables).
It can be used for underground network under low load, engineering structure crossing, or in area of high density network.

Description

- The plate roll offers permanent mechanical protection.
- It is rot-proof, corrosion and water resistant and shock absorbing.
- The plate is of red colour. Other colours are available upon request.

This protection plate roll meets the criteria of the **DIN 54841-5** standard.

Code	Designation	Dimensions LxHxD (mm)	Weight (kg)	Sales unit

U594	PROTECTION PLATE ROLL (width 300mm)	30 000 x 300 x 3	27	1

Other colours are available, please contact us.

Underground warning netting

Application

This warning grid is used to indicate the presence of buried underground services. The red one is used to indicate a buried electrical network.

Description

- Available in 3 widths: 100mm, 200mm and 300mm.
- Material : Polyolefin
- Mechanical tensile strength, color fastness and resistance to micro-organisms.

This flexible mesh meets the specifications of the **NF EN 12613** standard.

Other colors exist (green, yellow etc.) to identify different types of networks (telecommunication, gas etc.) etc.): please contact us.

TPC sheath

U345

Application

This sheath is used for protection of underground cables. It is available in ring (with draw needle) or in bar.

Description

- This sheath offers a compressive strength of 450 N (maximum deformation of 5%).
- This sheath offers an impact resistance in accordance of EN 61386-24 standard.
 - This product is delivered in ring (bendable) or in bar (rigid).
 - Installation and operating temperature is between -10°C et +90°C.
 - The protection degree is IP44.
 - The sheath is made with allogen free materials and without heavy metals.
- This product meets the requirements of the **EN 61386-1** and **EN 61386-24** standards.

HC103

E4R RF 35-70
HC102

E4R RF 10-35
HC101

E2R RF 10-35
HC100

Application

This cable sealing end is designed to ensure the watertightness of network and service stripped conductors ends. It is slid on the conductors and implemented without using flame.

The benefits:

- + No tool is required
- + Very short installation time

Description

- Cable sealing ends are made of elastomer materials very elastic, flexible, resistant and treated to ensure a good protection to UV.
- For 2 conductors :
 - Service cable of 10 up to 35mm² (**HC100**),
- For 4 conductors :
 - Service cable of 10 up to 35mm² (**HC101**),
 - Network cable of 35 up to 70mm² (**HC102**),
 - Network cable of 95 up to 240mm² (**HC103**).

Installation

- Clean and strip the cable over the appropriate length.
- Remove the cable screen as well as stockings and clean each conductor.
- Cover the cut with three turns of adhesive tape.
- Re-insulate the neutral using a re-insulation sheath.
- Slide the cable sealing end up to the stop on the cable side (1).
- Remove the applicator ring on the cable side (2).
- Remove successively applicator rings on each conductor (3).

CRC RF 46-80
P464

CRC RF 26-48
P463

CRC RF 16-27
P462

CRC RF 8-16
P561

Application

This cap is designed to ensure the watertightness of network and service cables conductors end. It can be used on cable drums. It is used exclusively without power.

The benefits:

- + No tool is required
- + Very short installation time

Installation video available on www.michaud-export.com

Description

- Cable caps are made of elastomer material very elastic, flexible, resistant and treated to ensure a good protection to UV.
- Cable caps are available in 4 dimensions:
 - For service cable of 1.5 up to 10mm² (**P561**),
 - For service cable of 16 up to 35mm² and peripheral three phase neutral (**P462**),
 - For network cable of 50 up to 150mm² (**P463**),
 - For network cable of 240mm² (**P464**).

Installation

- Make sure that the cable end is cleanly cut. If not, cut it again (1).
- Put the seal cap on the conductor end (2).
- Remove the applicator ring until total cap shrinking on the conductor (3).

* M means that the conductor core is solid.

Application

This sleeve is designed to ensure watertightness and insulation of bare fittings on low voltage network cables. It is designed for round or sectoral type conductors.

Description

- This sleeve is made of elastomer material, highly elastic, flexible and resistant.
- It is expand and waiting on an application ring which is breakable and disposable.
- The product is delivered with a mastic tape allowing to reinforce the weathertightness of the sleeve.

Installation

- Put on the sleeve around cable or conductor.

- Install the fitting and roll up the mastic tape on each side of it.

- Place the sleeve above the fitting. It should cover the two mastic tapes. Remove the application ring.

Code	Designation	Weight (kg)	Sales unit

Mecanico-shrinkable service end

Application

This product is designed to ensure watertightness at the end of a network cable and to connect home device with peripheral neutral service cable. No tool is required for the installation.

Description

- These end kits include a cold-shrinkable end and one or two sheaths designed to be put on conductors. The inside kits (EI) contain one sheath for the neutral. The outside kits (EE) contain two sheaths for three-phases cables. The detail of each kit is below.
- The neutral sheaths have a tinned copper socket on one end, designed to gather strands of the peripheral neutral conductor.
- Cold-shrinkable ends is implemented by the removal of 2 pieces in synthetic material, located at the product base.
- Three-phases cable caps have a fifth outlet for implementation of a meter-reading system. Especially when using meter reading system cable, type **NF C 33-214**.

Installation

- ①

- Strip the cable 10 cm longer than the useful length and remove the insulation and the stuffing.
- ②

- If needed, cut the sheath on the opposite side of the socket.
- ③

- Adjust approximatively the length of the neutral conductor to the sheath length.
- ④

- Slip on the sheath under the neutral conductor. The socket should be at the cable end.
- ⑤

- Slip the cold-shrinkable cap.
- Remove the 2 pieces in synthetic material.
- ⑥

- Cut the exceed strands from the socket.

Specialised in electrical distribution, MICHAUD develops its expertise with the arrival of Smart Meter, offering solutions for the counting environment and protection.

Evolution in the housing field: Smart Meter

Due to the evolution of european specifications for **Smart Meter systems**, it is necessary to assist meters manufacturers or distribution networks operators.

The Smart Meters roll out requires an adaptation of residential installations. MICHAUD invests to make the change easier by developing solutions **suitable for current installations and ready to receive new counting solutions**.

Thanks to its expertise and engineering, MICHAUD proposes **custom-made solutions** to better suit the project.

The benefits

Anticipate and facilitate transition towards Smart Meter

Reduce intervention time as well as electricity supply cut time

Minimise roll-out cost

Adaptation to new counting systems

In this scalable environment, the development of **universal solutions** enables better preparation for change according to evolution of Smart Meter technology.

Thanks to its skills and its expertise, MICHAUD was a pioneer regarding the design of insulation piercing end connector. It is a solution for universal connection between service cable and board terminals enabling to realise safe connection between aluminium and copper.

Characteristics

Connection between the aluminium service cable and the copper board terminal.

Cable tail flexibility and small end connector bulk.

Possible tail extension.

Assets

- + No electrolytic corrosion phenomenon
- + Easier fitter work in confined space
- + Easy renovation

Available end connectors types

Type	Normative rating	
Insulation piercing end connector EBCP 6-35	EBCP 6-35/16	Tail section (16 or 25)

Reversible stripping end connector EBCD 6-35	EBCD 35-25	Tail section Leading-in connector maximum section

Floor supply box S31

Utilisation

The 200A floor supply box allows 6 single-phase service connections or 2 three-phases service connections from a electrical column.
It can be installed vertically or horizontally.

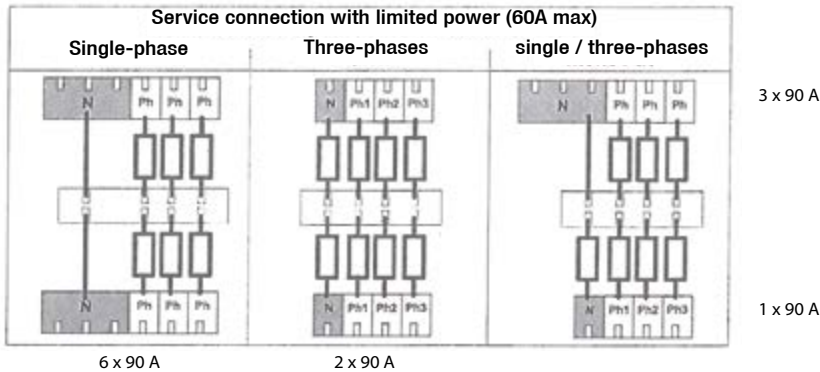

Description

- The floor supply box is made of a basement with cover in synthetical material, 2 base support bars and a terminal block.
- The protection degree is IK10.
- The principal terminal block is removable and allows a bare connection for conductors 25 to 95 mm² Cu, or a bar from 24 mm² to 96 mm².
- The tightening of the terminal blocks is done with a insulated 6mm socket wrench.
- The floor supply box can receive fuse holder (14x51 or 22x58).
- Floor supply box allows 6 single-phase service connections or 2 three-phases service connections with a power limit of 45kVA.
- An assembly version is also available :
 - For 2 single phase service connections (K540.A)
 - For 3 single phase service connections (K540.B)
- It was designed with **HN 62-S-3** standards.

Code	Designation	Dimensions (mm)			Weight (kg)	Sales unit
		L	I	H		
K540	FLOOR SUPPLY BOX S31	430	235	165	3.050	1

Configuration

Accessories

- Fuse holders are available in two different sizes :
 - * 14x51 for fuse cartridge AD 15 and 30A,
 - * 22x58 for fuse cartridge AD 30, 45, 60 and 90A.
- They are equipped with connection leg which allows the connexion before supplying the floor supply box.
- The triple neutral allows until 3 neutral taps thanks to its 3 independent terminal blocks.

Code	Designation	Sales unit

IRO tube

Application

These IRO tube are used outside to allow mechanical protection round electrical cables.

Description

- This tube offers a compressive strength of 750 N (maximum deformation of 25%).
- This tube offers an impact resistance of 2 Joules.
- This tube is delivered in rigid bar of 3 meters.
- This tube is delivered with a junction sleeve.
- Installation and operating temperature is between -5°C et +60°C.
- The protection degree is IP43.

This product meets the requirements of the **EN 61386-1** and **EN 61386-21** standards.

Meter circuit breaker box

F732 (Single phase)

F733 (Three-phases)

Application

The customer box is designed to receive a meter and the needed protection equipment. It can be installed outside or inside the house.

Description

- The box is available in single-phase and three-phase versions.
- It includes two 22x58 fuses for the single-phase version and four 22x58 fuses for the three-phase version (phase and neutral protection).
- Includes:
 - A support for a meter,
 - A support for an earth leakage circuit breaker.
- It has a window on the front for reading the meter, and a hatch for accessing the location of the earth leakage circuit breaker.
- It has 2 entries equipped with 2 grommets for watertight cable routing at the bottom of the box.
- Injection-molded, fiberglass-reinforced synthetic materials offer excellent resistance to climatic conditions (very good protection against UV rays, humidity and water penetration).
- Enclosure protection degree :
 - IP 43 according to **NF EN 20010** and **NF EN 60529** standards
 - IK 09 according to **NF EN 50120** and **NFC 20015** standards
- It can be sealed or padlocked to limit tampering and access to live parts (components not supplied)
- It can be fastened with screws and plugs or strap (components not supplied)
- The F734 and F735 models feature a DIN rail specifically for mounting a modular circuit-breaker.
- These enclosures can be customized by marking the circuit-breaker access hatch.

Accessories

U609

Application

The box is part of the control panel board. It is designed to fulfill the individual main branch circuit breaker. It is intended to receive a 22x58 fuse.

Description

- The terminals of this device can accept either copper or aluminum conductors with a cross section of 6 to 35 mm².
- These products are designed to be used in cabinets placed either outside or inside the home.
- The wide-open base assembly facilitates wiring and limits heating during operation.
- Fixation must be done vertically.
- It is designed to receive a 22x58 fuse. Delivered without fuse.
- Maximum current: 60A.

Code	Designation	Weight (kg)	Sales unit
U609	UNIPOLAR CUTOUT 22x58	0.152	80

Description

- U607-T corresponds to 2 x U609.
- The terminals of this device can receive sections from 6 to 35 mm².
- Fixation must be done vertically.
- Delivered without fuse.
- Maximum current: 60A.
- Le U608-T corresponds to 4 x U609.
- The terminals of this device can receive sections from 6 to 35 mm².
- Fixation must be done vertically.
- Delivered without fuse.
- Maximum current: 60A.

Universal meter board and accessory

K424

Application

This meter board is used to receive any residential type electric meter whether single phase, three phase or tetrapolar, equipped with a cable cover. It can be combined with pluggable or non-pluggable module type connection equipment.

Description

- The assembly is made of grey synthetic self-extinguishing materials (RAL 9035).
- The board is equipped with a removable clipped cover which is dismountable to make equipment wiring easier.
- The board is vertically fixed to a flat surface and possibly by means of alignment laths (see Accessories).
- When equipped with a tetrapolar meter, the board is IP4X on the front face and IK4.

The board is used to fix meters that meet the criteria of the **DIN 43857** standard.

Code	Designation	Weight (kg)	Sales unit
K424	SUPPORT FOR ELECTRIC METER + COVER	0.500	240
K425	COVER (FOR ELECTRIC METER SUPPORT)	0.080	1

Accessories

Code	Designation	Weight (kg)	Sales unit
K422	ALIGNMENT LATH (Length 3m)	1.500	270
K422-2	DUAL ALIGNMENT LATH (Length 3m)	1.470	200
K421	GABARIT FOR ALIGNMENT LATH	0.320	1

Comment: if the supporting wall is uneven, the meter board can be mounted using alignment laths. The laths are made from grey PVC. The gabarit makes it easier to assemble the laths and guarantee a centre-to-centre distance of 150mm between laths.

Installation

Meter circuit-breaker board

P475

P474

Application

This board is designed to accommodate the single phase electronic meter and the circuit-breaker. It defines the boundary between the energy distributor and the installer private domain. The cover is optional.

Description

- The assembly is made of white synthetic self-extinguishing materials (RAL 9010).
- The front face is equipped with a fixing rail for installing the meter and windows for conductors to run through. It can be dismantled for easier wiring of the devices. The rail can be removed for installing the meter.
- The board is equipped with connectors fixed to the bottom, designed to receive the leading-in cables from the top or the bottom. The terminals use insulation piercing technology and shear heads.
- Connectors have a IPXXB protection degree after installation. The system integrates 16mm² copper links which length enables the connection of any meters with terminals at the top or bottom.
- The terminals downstream of the circuit-breaker are accessible via a drawer in the lower part.
- The meter board can be covered with the P474. The cover is equipped with a board fixing to be attached on the board and a swivel window on the front face to access the meter and circuit breaker.

Code	Designation	Weight (kg)	Sales unit

AMM concentrator data supply kit

AMM concentrator data supply kit (K716)

P070

Application

This kit is designed for the installation of an AMM (Automatic Meter Management) data concentrator in a LV/MV transformer or on a pole depending on the type of network (underground or overhead). These products supply and protect the concentrator.

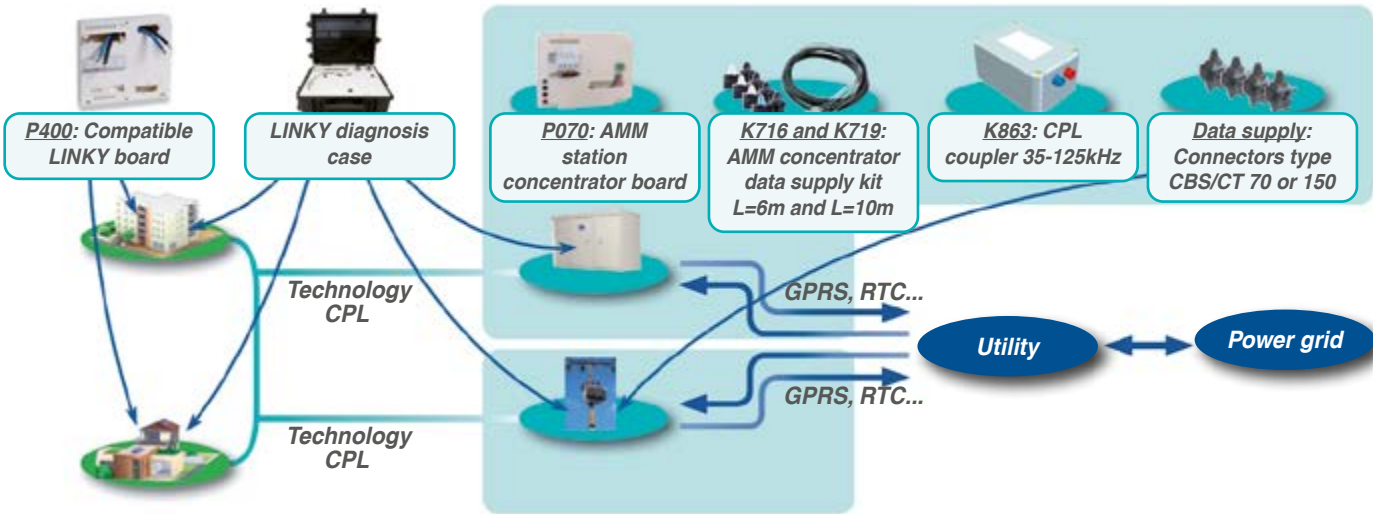

Description

To facilitate the use and management, these products are supplied in packs:

For LV/MV underground stations: Pack Alim L6000 + AMM station connector board

- This pack comprises the following elements:
- 1 AMM station concentrator board (P070) of dimensions 377x281 equipped with:
 - 1 DIN rail on which a three phase cutout is fixed
 - 4 links 2.5mm² for the cutout and concentrator connection through a pluggable service end.The concentrator board is delivered with 3 fuses cartridges size 10.3x38, gauge 2A, a neutral tube and 3 screws pre-screwed on the connector board ensuring the concentrator fixing.
 - 1 AMM concentrator data supply kit L=6M (K716) or L=10M (K719) comprising:
 - 3 phase connectors and 1 neutral insulation piercing connector with integrated removable fuse protection (3P+1N), 3 fuses size 10x38, rated 10A and a neutral tube.
 - 1 connection link of 6 or 10 meters (depending on the type) between connectors and the concentrator board cutout. It is equipped with quick connection plug on the connectors side end.

Installation

* LINKY: French electricity board Erdf electronic Smart Meter.
For the references P400 and K863, contact us.

Modular distribution box

Projecting

Application

This one row modular distribution box is designed to be equipped with devices that protect the customer installation.

Description

- The assembly is made of synthetic materials passing the incandescent wire resistance test at 750°C.
- The cover is white (RAL 9010) and offers a IP30/IK05 protection degree.
- The distribution boxes with 6 and 9 modules are delivered with an IP2X earth system terminal offering 7 inlets/outlets including connection terminals of 16mm² section maximum.
- The distribution boxes with 1 up to 6 modules can be opened using a clip. The distribution box with 9 modules uses screws.

This distribution box meets the criteria of the **NF C 61-910** specification.

30 mA differential switches

Application

The 30 mA differential switches for two-phases are designed to protect persons by detecting insulation defects. The AC-type detected faults on the AC component. The A-type detected faults on the AC and DC components. The DC components faults can be produce by some electrical devices. The size of differntial swith is 2 modules.

Integrable

Application

This integrable modular distribution box is designed to be equipped with devices that protect the customer installation.

Description

- Several box widths are available: 8, 12, 24 (2 rows of 12) and 36 (3 rows of 12) modules.
- The cover is white and the door is transparent.
- The opening and closing system is ergonomic and the door is reversible.
- The distribution box offers IP40 protection degree (protection against penetration of body superior or equal to 1mm).
- The use temperature range goes from -25°C up to 60°C.
- Used materials are without halogen.

Cutout cabinet

Application

The cabinet is part of the installation check board. It ensures the connection individual principal cutout function. It is designed to receive fuse cartridges size 10.3x38, 14x51, 22x58 and DIN 00.

Description

- The cover is equipped with ventilations (except P100 and U606) and a huge air volume restricting warming.
- The sealing is performed with two 90° notches in the cover and a hole in the tightening screw indexed in the crack for U607, U608 and U606.
- Terminal screws are in stainless steel. They allow an important durability in harsh atmosphere (except U606).
- Cabinet's cage terminals of the board P100 can receive cable sections from 1.5mm² up to 10mm².
- Cutout terminals, size 14x51, can receive cable sections from 6mm² up to 25mm².
- Cutout terminals, size 22x58 and DIN 00, can receive copper or aluminium cable sections from 6mm² up to 35mm².
- The cabinet P100 is delivered equipped with a neutral tube. The other ones are delivered empty.

The synthetic materials that are used meet the criteria of the **HN 60-E-02** and **HN 60-S-02** specification.

Code		Designation	Weight (kg)	Sales unit

PROTECTION / Fuses

Seal

Numbered seal with wire

Utilisation

This seal is designed with a fast closing system by means of a locking button. It is specifically designed to be installed on water, gas or electricity meters. The breaking of the link enables to highlight a potential fraud.

Description

- The seal is made of polyamide (PA), mono-material and recyclable.
- The seal is UV treated.
- The fast closing of the seal is done by means of the locking button and without tools.
- Once closed, the tensile strength is 8kg.
- The link diameter is 1.4mm and it is suitable for small holes and ayelets of a minimum diameter of 1.5mm. The introduction way is not important.
- The seal conception enables to tighten very close to the product from a maximum diameter of 30mm to a total tightening.
- The seal has four areas for marking around the locking button:
 - Three markings comprising 5 digits
 - One marking comprising 2 digits
- The flag is optional (to be specified when ordering).
- The seal identification on the flag is realised through:
 - One barcode to guarantee a certain handling of the information
 - One marking comprising 8 digits

Dimensions in mm

Code	Designation	Length (mm)	Weight (kg)	Sales unit
F010-500-V	PLASTIC SEAL WITH UNIQUE NUMBER GREEN (BAG 500 PIECES)	188	0.960	6
F010-500-O	PLASTIC SEAL WITH UNIQUE NUMBER ORANGE (BAG 500 PIECES)	188	0.960	6

Nota: Minimum order quantities are 6 bags of 500 pieces.

Plastic seal

Application

This seal is designed with a tail to run through a locking hole. It is used to seal electrical equipment, water meters, gas meters, etc. The breakage of this element highlights possible fraud.

Description

- These seals are made of UV resistant synthetic materials.
- The seal identification is made through:
 - A 1234567 marking type (7 digits consecutive numbering) for F010-500
 - A permanent marker inscription for K910
- They are implemented manually without using particular tools.
- These seals are available in blue, red, white and black. For other colors, contact us.

Code	Designation	Length (mm)	Weight (kg)	Sales unit
K910-B	BLUE SEAL (BOX OF 100 PIECES)	130	0.240	1
K910-K	BLACK SEAL (BOX OF 100 PIECES)	130	0.240	1
K910-R	RED SEAL (BOX OF 100 PIECES)	130	0.240	1
K910-W	WHITE SEAL (BOX OF 100 PIECES)	130	0.240	1

Sealable screw cover

Application

When installing the meter, the anti-fraud system may need to be modified. This sealable screw cover is designed to seal a screw.

Description

- The screw cover enables to seal a fixing swrew with the following dimensions: 6mm on threads, head height of 4mm (max) and head diameter of 7mm (min) up to 12mm (max).
- The screw cover can receive a seal of maximum 2mm diameter.

Code	Designation	Weight (kg)	Sales unit
P641	SEALABLE SCREW COVER (2mm diameter)	0.002	20
P642	SEALABLE SCREW COVER + 5x30 VBA SCREW	0.006	20
U433	WOOD SCREWS (x100)	-	1
F332	WOOD SCREWS POZIDRIVE (x200)	1.600	1

Insulation piercing end connector EBCP 6-35

Application

This end connector is used for the connection of leading in cables to electrical equipment terminals (cutouts, electronic meter, etc). This is a universal solution for connecting the cable to the meter terminals, regardless of the type of metal or the block nature. It can be fitted on copper or aluminum stranded, or solid core conductors.

Description

- The end connector uses the insulation piercing technology (6-35mm²)
- The protection degree is IP2X when it is implemented
- The maximum power running through the insulation piercing end connector is 63A for 16mm² and 90A for 25mm².
- Low dimensions enable to easily fit the end connector behind the panel in a restricted space.
- Solid teeth ensure connection in extreme environments even under low temperatures.
- The sturdy material of the cover allows it to be held with pliers during installation, making it easy to maintain.

This end connector meets criteria of the **H-M24-2011-02598-FR** specification.

Code	Designation	Out of box lenght: L (mm)	Capacities (mm²)	Weight (kg)	Sales unit

Insulation piercing end connector EBCP 16-50 Class II

Application

This end connectors range is used for the connection of leading in cables to electrical equipment terminals (cutouts, electronic meters, ect). It is a universal solution to connect the connection cable and the meter terminals no matter what is the metal or the block nature. The end connector can be fitted on sectoral or circular-shaped copper or aluminum stranded or solid core conductors. It provides class II protection using the double insulated colored tail, when equipped with the cover.

Description

- The end connector uses the insulation piercing technology (16-50mm²).
- The protection degree is IP2X when it is implemented.
- The maximum power running through the insulation piercing end connector is 80A.
- Low dimensions enable to easily fit the end connector behind the panel in a restricted space.
- Solid teeth ensure connection in extreme environments even under low temperatures.
- The robust material constituting the cover enables it to be held with a pair of pliers during installation, facilitating holding.
- The synthetic cover ensures a protection class II of the connector body and can be sealed.
- The reference P220 comprises a kit of 3 colored end connectors with black, brown or grey tail.

Option: Class II Setting-up

The cover (L220) enables to establish a class II installation.

Code	Designation	Out of box length: L (mm)	Capacities (mm²)	Weight (kg)	Sales unit

L220	EBCPAU COVER CLASS II			0.020	12

Option :

Insulation piercing end connector for earth systems.

A wide range of insulation piercing end connectors has been designed for earth system:

- P 227 and P 226 with two tails (yellow/green and blue) for connecting and earth system the neutral at the same time,
 - P228 with one tail (yellow/green) for the earth conductor.
- The neutral conductor (blue) has double insulation whereas the earth conductor (yellow/green) has single insulation as it is not considered as a live element (class II not required).

Code	Designation	Out of box length: L (mm) tail	Out of box length: L (mm) earth system	Capacities (mm²)	Weight (kg)	Sales unit

Reversible stripping end connector EBCD 6-35

P620

MICHAUD Exclusivity
Patented system

Application

This end connectors range is used for the connection of leading in cables to electrical equipment terminals (cutouts, electronic meters, ect). It is a universal solution to connect the connection cable and the meter terminals no matter what is the metal or the block nature. They can be fitted on copper or aluminum stranded or solid core conductors.

Description

- The end connector uses the stripping technology (6-35mm²).
- The protection degree is IP2X when it is implemented.
- The maximum power running through the stripping end connector is 90A.
- The end connector can be connected in two opposite directions, which overcomes bulky loops in the event of insertion of the power cable from the top.
- Low dimensions enable to easily fit the end connector behind the panel in a restricted space.
- The robust material constituting the cover enables it to be held with a pair of pliers during the installation facilitating the holding.

The benefits:

- + Connection possible from the top or bottom
- + A flexible cap enables to make the tightening screw inaccessible
- + The reversible end connector can either remain floating or be fixed using a 4mm diameter screw

Code	Designation	Out of box length: L (mm)	Capacities (mm ²)	Weight (kg)	Sales unit
P620	SET OF 2 EBCD 35-25 (1 BLACK + 1 BLUE) - SINGLE PHASE KIT	185	6-35	0.220	1
P621	SET OF 4 EBCD 35-25 (3 BLACK + 1 BLUE) - THREEPHASE KIT			0.440	1

Nota: please enquire for any other length.

Flexible linking cable

Application

The flexible linking cable is used for the equipment wiring when the rigid stranded core or solid core conductor installation is too difficult.

Description

- The linking cable is a 16mm² or 25mm² flexible copper conductor, multi-stranded of H07 VK type.
- Each end is factory crimped with a tinned copper-bonded socket or a stripped and tinned socket for J412 and J413. The socket is designed for connection to a plate or tunnel terminal, or to an insulation piercing terminal.

- The length L of the link is stated on the right-hand page.

Code	Designation	Conducteur (mm²)	Length (mm)	Weight (kg)	Sales unit
J045	1 BLUE 16mm² LINKING CABLE L560	16	560	0.100	10

J041	1 BLUE 16mm² LINKING CABLE L1200	16	1 200	0.200	10
J042	1 BLACK 16mm² LINKING CABLE L1200	16	1 200	0.210	10
J808	SET OF 2 16mm² LINKING CABLES (1 BLUE + 1 BLACK)	16	560+530	0.215	1
J809	SET OF 4 16mm² LINKING CABLES (1 BLUE + 3 BLACK)	16	560+3x440	0.370	1
J412	BLUE CABLE 16VK L500	16	500	0.085	200
J413	BLUE CABLE 16VK L500	16	500	0.085	200
J132	1 BLUE 25mm² LINKING CABLE L700	25	700	0.185	5
J133	1 BLACK 25mm² LINKING CABLE L700	25	700	0.180	5

Variants:

Two insulation piercing end connectors can be connected to the ends of the flexible linking cable for connection to other conductors.

- Possible sections for conductors to be connected:
- Aluminium solid core conductors: 16M, 25M, 35M, 50M *,
 - Aluminium or copper rigid stranded core conductors: 10mm², 16mm², 25mm²,
 - Copper multi-stranded conductors: 10mm², 16mm², 25mm² (in this case, the connection must be carried out only if the end of the conductor has been compressed).

* M means that the conductor is solid.

Code	Designation	Weight (kg)	Sales unit
P660	SET OF 2 16mm² EBCPAU LINKING CABLE SINGLE 2 PIERCINGS	0.260	1
P662	SET OF 4 16mm² EBCPAU LINKING CABLE THREE-PHASE 2 PIERCINGS	0.505	1

Reducing end connector

Service

Application

This end connector is used for connecting a conductor with a given section into a terminal with a smaller one. It is usually used for industrial supplies and long-line supplies.

Description

- The dielectric strength in water is greater than 6kV.
- The flexible copper tails enable direct connection to the equipment.
- The conductor connection terminal is of insulation stripping type.
- This end connector can be used on aluminium or copper conductors.

Code	Designation	Tail length (mm)	Leading-in capacities Al-Cu (mm²)	Tail section (mm²)	Weight (kg)	Sales unit
K126	STRIPPING REDUCING END CONNECTOR 95-240	300	Round 95-150 Sectoral 95-240	50	0.780	4

K128	STRIPPING REDUCING END CONNECTOR 6-50M	230	Round 6-35 Round 16M-50M	25	0.170	2

Note: For other adaptations, please contact us.

Fraud-preventing service connection

Application

This end connector is used for connecting a service conductor to an equipment terminal. Four models are available with black tail for Phase connection (K129 and K131) or blue for Neutral connection (K130 and K132). This solution is used to secure the outdoor connection to equipment terminals.

Description

- The dielectric strength of the end connector in water is greater than 6kV.
 - The service end connector is designed for connection to 6-35mm² section copper or aluminium conductors.
 - A 16mm² insulated flexible copper tail enables connection to equipment terminals (meter circuit-breaker).
 - The conductor connection terminal is of insulation piercing type. The shear head ensures tightening efficiency.
- Note: to prevent dismantling of the end connector with risk of fraud, none of the permanent screw heads is accessible.

*Dimensions in mm
L= 220 (K131 and K132)

SOLUTIONS FOR INSTALLATION

In order to offer global service to customers, MICHAUD proposes a range of equipment and tools to **facilitate and to secure** products installation.

Protection against the electrical risk

During the installation of electrical equipment, the protection of the fitters from risks of direct or indirect contacts is a necessity. The risk is real when a part of the human body is in contact with an active part of the installation.

Several conditions must be respected to guarantee protection:

- Installation of products with **no load**, except for specific indications
- Respect of the current **regulation**
- **Trained** and skilled **staff**
- Use of **personal protective equipment**

Classification of maximum used voltages of insulated gloves:

Class	Working voltage (V)	Tested voltage (V)
00	500	2 500
0	1 000	5 000
1	7 500	10 000
2	17 000	20 000
3	26 500	30 000
4	36 000	40 000

A support for your installations

MICHAUD uses its expertise to guide at best the fitters.

> Installation instructions

+ Products supplied with detailed instructions for the assembly >>>

> Installation videos

+ Supporting videos for some products >>>

See videos on
Michaud Export Youtube Channel

> Training

+ Fitters' guidance on the field >>>

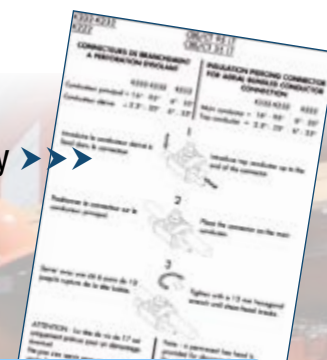

In the low voltage field, **fitters' safety and protection** are essential themes. With a range of personal protective equipment, MICHAUD ensures an installation on safe environments.

To realise an installation in the best conditions, MICHAUD offers a **range of tools and equipment** to support low voltage lines and accessories.

In order to support the fitter the best way, MICHAUD supplies its products with **didactic solutions** assuring the right installation and to guarantee fitters' safety.

Personal protective equipment

Hands protection

Application

These equipment aim to protect hands during installation works.

PROTECTIVE NITRILE GLOVES

U833-1

These gloves are in nitrile on hands palm. They offer an important perforation resistance.

PROTECTIVE LEATHER GLOVES

U833-2

These leather gloves are made of red leather. They offer an important perforation and cutting up resistance.

LEATHER PROTECTION GLOVES

F081

The handling leather gloves protect insulating gloves against sharp and cutting objects. A scratch band holds the handling gloves around the wrists.

Code	Designation	Size	Weight (kg)	Sales unit
U833-1	PROTECTIVE NITRILE GLOVES	S - M - L - XL	0.200	1
U833-2	PROTECTIVE LEATHER GLOVES	33cm	0.220	1
F081	LEATHER PROTECTION GLOVES	10	0.160	1

Accessories

Utilisation

These insultaing gloves are designed to protect against electrical shocks during powered works. Accessories are used to check the watertightness of the insulating gloves.

U82x

Description

- Gloves are available in one size (size 10).
- According to the kind of work to realize, the range goes from class 00 to class 4.

Code	Designation	Weight (kg)	Sales unit
U820-10	INSULATING GLOVES CLASS 00 (500V)	0.530	1
U821-10	INSULATING GLOVES CLASS 0 (1 000V)	0.550	1
U822-10	INSULATING GLOVES CLASS 1 (7 500V)	0.575	1
U823-10	INSULATING GLOVES CLASS 2 (17 000V)	0.600	1

U832-2	FILTERING HALF MASK WITH VALVE - FFP2	0.070	1

Eyes protection

U831-1

U831-2

These tinted protection glasses have a UV filter.

U831-3

U831-4

The flexible vinyl frame gets an anti-fog treatment.

U831-5

This face shield guarantees a protection from impact.

The standard is EN 166. The product has a optical class 2, a protection from risk of impact "F" and a mechanical resistance "A".

U831-6

This set comprising face shield + helmet guarantees an electric arc protection.

Code	Designation	Weight (kg)	Sales unit
U831-1	PROTECTION GLASSES	0.030	12
U831-2	PROTECTION GLASSES TINTED - UV FILTER	0.030	12
U831-3	PROTECTION OVER GLASSES	0.035	1
U831-4	PROTECTION MASK	0.070	1
U831-5	FACE SHIELD - IMPACT PROTECTION	0.300	1
U831-6	FACE SHIELD - ELECTRIC ARC PROTECTION	0.500	1

Personal protective equipment

Dielectric and mechanical protection

U826 - high shoes

U827 - short shoes

Application

These safety shoes ensure protection against electrical shocks. They also offer a mechanical protection. Two models are available :

- high shoes
- short shoes

Description

- These shoes are made of bovine black leather. They comprise a polyamide anti-allergic lining, a polyurethane antistatic sole and a non-metallic end. The antistatic property of the sole does not protect against electrical shocks.
 - The models are tested in compliance with ANSI Z41 and ASTM F2413-05 standards. When 14 000 and 18 000V currents are applied during 1 minute with a 60Hz frequency, the passage of current intensity is inferior to 1mA (according to conditions described in the standards).
 - Available sizes go from 39 up to 46.
 - The shoes offer an impact resistance of 200J and a compression resistance of 15kN. The sole is resistant to hydrocarbons.
 - The resistance to perforation is about 1100N.
 - The energy absorption in the heel is superior to 20J for both models.
 - Shoes are waterproof.
 - They provide an insulation against cold and heat coming from the ground. The resistance to heat contact from the ground is 300°C.
 - The soles are nonskid.
- Dielectric safety shoes are not a substitute to obligatory PPE but an element of secondary protection.
- These shoes meet the criteria of **EN ISO 20345** standard.

Code	Designation	Available sizes	Protection classes	Weight (kg)	Sales unit
U826	HIGH SAFETY SHOES - DIELECTRIC AND MECHANICAL PROTECTION	39 up to 46	SB+P+E+CI+HI+WRU+HRO+SRC+FO	0.900	1
U827	SHORT SAFETY SHOES - DIELECTRIC AND MECHANICAL PROTECTION	39 up to 46	SB+P+E+CI+HI+WRU+HRO+SRC+FO	0.700	1

Required size:

Add the required size to the reference.
Example with the high shoes model, size 42 : **U826-42**

Mechanical protection

U828 - high shoes

U829 - short shoes

Application

These safety shoes ensure a mechanical protection. Two models are available :

- high shoes : allow an optimal support of the ankle.
- short shoes

Description

- The shoes are made of black bovine leather.
- The antistatic property of the sole does not protect against electric shocks.
- Available sizes range from 40 to 47 for the high model and from 39 to 46 for the short one.
- The shoes offer an impact resistance of 200J.
- They dissipate electrostatic charges.
- The shoe sole absorbs energy at the heel.
- The shoe sole is resistant to perforation. It is also resistant to oils and hydrocarbons.

These shoes meet the criteria of the **EN ISO 20345** standard.

Code	Designation	Available sizes	Protection classes	Weight (kg)	Sales unit
U828	HIGH SAFETY SHOES - MECHANICAL PROTECTION	40 up to 47	S3	1.500	1
U829	SHORT SAFETY SHOES - MECHANICAL PROTECTION	39 up to 46	S2+CI+SRC	0.700	1

Required size:

Add the required size to the reference.
Example with the high shoes model, size 42 : **U828-42**

Personal protective equipment

Insulating mat

U840

Application

This mat is used to protect the work area and the installer from contact voltages, when working off-load in HV and on-load in LV. Several models are available, from class 0 to class 4.

Description

- This mat is made of rubber with non-slip surfaces on both sides.
- The mat offers high dielectric rigidity.
- It can be used in temperatures ranging from -40°C to +70°C.
- The mat is laid directly on the floor.

- The insulating mat is not a substitute for compulsory PPE, but is a secondary protective element. It meets IEC 61111 criteria.

Code	Designation	Alternating voltage RMS (V)	Thickness (mm)	Weight (kg)	Sales Unit

Insulating ladder

U841

Application

This insulating ladder protects the installer from contact voltages during electrical installation work.

Description

- This ladder is made of fiberglass. It is made entirely of composite material and has no metal parts for mechanical connections (screws, nuts, etc.).
- The ladder is lightweight and therefore easy to transport.
- It is highly resistant to atmospheric and chemical agents.
- It is available in several lengths.
- The bottom of the ladder is fitted with a stabilizer for models over 3 meters long.

This ladder complies with the EN 131 standard.

Collective protective equipment

Warning tape

F865

Application

This warning tape enables to secure and delimit a work area on a construction site.

Description

- The warning tape is red and white (stripes).
- It is made of polyethylene.
- It is delivered in roll of 100m.

Code	Designation	Length (m)	Width (mm)	Thickness (mm)	Weight (kg)	Sales unit
F865	WARNING TAPE RED/WHITE (ROLL 100m)	100	70	0.050	1.500	1

Safety barrier

F864

Application

This safety barrier enables to secure and delimit a work area on a construction site. This netting is made of stretch mesh and offers a high tensile strength allowing extension without any risk of deformation or tearing.

Description

- The safety barrier is orange.
- The unoriented manufacturing process makes it more resistant in lengthwise axis.
- The netting is made of high density polyethylene.

It meets the criteria of the **EN 13934-1** standard.

Code	Designation	Length (m)	Height (m)	Color	Weight (g/m²)	Sales unit
F864	NETTING BARRIER	50	1	Orange	90	1

LV line unwinding and pulling

Pulley for aerial bundled conductors

Application

This pulley is designed to receive low voltage A.B.C. (Aerial Bundled Conductors) for unwinding and pulling operations.

Description

- The body of the pulley is made of aluminium alloy.
- The 250mm diameter wheel is made of synthetic materials. It has a 60mm groove to make the passage of A.B.C. up to 3x150 + 70N + 16mm² easier.
- The pulley is equipped with safety locking allowing the rope to be fitted with one hand. This system prevents the rope and therefore the A.B.C. from jumping out of the wheel during handling.
- Two types of pole fixing are available:
 - Pulley with swivelling hook,
 - Pulley with ratchet tightener and 1.20m strap.

Code	Designation	Pulley width (mm)	Operating load (daN)	Weight (kg)	Sales unit
F240	PULLEY WITH STRAP	60	800	5.200	1
F241	PULLEY WITH HOOK	60	800	2.650	1

For other characteristics, please contact us.

Mechanical winch

Application

This mechanical winch is designed to pull conductors of a low voltage power line. Light and small, it can be used for all types of cable adjustments, in particular on top of supports. It can be used also for lifting loads, stowing poles and other applications.

Description

- Two hooks at each end enable the winch to be fixed. They are equipped with a safety locking pin.
- The operating arm with ergonomic handle makes it easier to adjust the traction.
- The body is equipped with ratchet tightening system.

Code	Designation	Operating load (daN)	Weight (kg)	Sales unit
U354	MECHANICAL WINCH 500	500	9.00	1
U355	MECHANICAL WINCH 1 000	1 000	9.00	1

Overhead comealong clamp

Application

This overhead comealong clamp is designed to pull, retain and stretch bare or insulated conductors of a power line. Three models are available according to the type of conductors to be implemented:

- Bare steel or aluminium cable,
- A.B.C. (Aerial Bundled Conductors) type neutral messenger,
- A.B.C. type fully supported.

Description

- The half-cylinder shaped parallel jaws ensure secure tightening of the conductor, protecting it.
- An ergonomic handle with its wide opening enables good handling.
- The sliding of the jaws and arms is facilitated thanks to bolts and slides.
- The assembly is made of corrosion-proof galvanised steel or aluminium.

Code	Designation	Conductor type	Tighten capacity	Maximum load (daN)	Weight (kg)	Sales unit
F257	BARE CONDUCTOR COMEALONG 4-12mm	Bare Al / Steel	4-12mm	1 700	0.500	1

			4x150mm²	900		

Wire-strainer

Application

This wire-strainer is designed to pull conductors on a low voltage electrical line manually. The forward/backward distance can be varied by changing the position of the cam to increase the traction speed to reduction of the effort.

Code	Designation	SWL (kg)	Ø cable or Ø wire to pull (mm)	Lever's two way distance (mm)	Comealong type	Weight (kg)	Sales unit

Overhead pulling grip and swivel

Swivel

Application

This overhead swivel is used between two overhead pulling grips to replace an old conductor by a new one or between a pulling grip and the wire rope on the winch. It prevents any twisting of the conductor during pulling, unreeling and laying. All of the parts are made of alloyed steel.

Code	Designation	A (mm)	B (mm)	C (mm)	Ø D (mm)	E (mm)	Linear break-down (daN)	Weight (kg)	Sales unit

Overhead pulling grip for self-supporting cable

Description

- These pulling grip are made of galvanized steel.
- They are requested for implementation of self-supporting cable.

Application

This overhead pulling grip is designed for the pulling, unreeling and larying of bare and insulated self-supporting overhead cables.

Code	Designation	Ø of cables (mm)	Maximum operating load (daN)	Requested cable	Weight (kg)	Sales unit
U359-30	OVERHEAD PULLING GRIP GALVA SS 4x35-50 ² - 30mm	23 to 29	8 000	Self-supporting 4x35 et 4x50 ^{2*}	1.450	1

*According to HD626 standards

Overhead pulling grip for neutral messenger

Simple-loop nylon Double-loop nylon

Application

This overhead pulling grip is designed for the pulling, unreeling and larying of bare and insulated overhead cables with neutral messenger.

Description

- The pulling grip for neutral messenger is made of galvanized steel.
- The pulling grip for aerial bundled cable with neutral messenger is made of nylon and are available in simple or double-loop.
- The single-loop overhead pulling grip has one buckle at one end and is closed (with a splice end) on the other end. It is used to pull a cable at its end.
- The double-loop overhead pulling grip has two buckles and is open on its two ends. It is used to start the pulling at its end and all along the cable.

LV insulated tooling

Application

These toolings are designed to realise connections.

F445

INSULATED RATCHET WRENCH HEXAGONAL

This ratchet spanner is generally used for the installation of connectors. It has a H13/H17 end socket. It is manufactured according to the standard: **DIN EN 60900: 2012 = 1000V + double triangle.**

K004

HOLDING SPANNER

The holding spanner is designed to facilitate the installation of service connectors. It is placed on the connector walls.

K005

INSULATED WEDGE SEPARATOR

The wedge separator is designed to separate a conductor in an aerial bundle or in an underground cable to enable localised work on this conductor. It comprises 2 wedges linked by a 1m long cord. Each black wedge is made of strong synthetic material, and is UV, shock and cold resistant.

2 separations are possible:

- 2cm: for the installation of connectors.
- 4cm: for the installation of anchoring and pulling devices.

A hole at the end enables insertion of a tool to make 90° rotation easier, providing the separation from 2 to 4cm. Very smooth ribs and a slight penetration angle make wedge insertion in the cable easier.

F450

BRUSH

This brush is used with neutral grease to brush conductor cores in order to remove the oxide film.

Code	Designation	Weight (kg)	Sales unit
F450	BRUSH FOR CONDUCTOR WITH CASE	0.080	1

K007	INSULATED WEDGE SEPARATOR 200x15x9mm	0.050	10

Spanners

INSULATED CROSS SPANNER 8 - 10 - 13 - 17mm

The particular structure of this spanner allows it to be easily held. Generally, 13 and 17mm spanners are used for the installation of insulation piercing connectors. The 4 sides are insulated from one to another one. This cross spinner ensures a 1000 V protection. This product complies with the **IEC EN 60900** standard.

Tooling

Consumable material

**L024**

NEUTRAL GREASE

This tube of neutral grease is used to brush the conductors to be connected and thus protect the electrical connection. The neutral grease complies with the ERDF France technical guide. It is neutral as regards aluminium and copper. It has the following technical characteristics:

- A high drop point (190°),
- A wide use temperature range (-20°C up to + 120°C).

**U843**

ADHESIVE TAPES

Specially designed for any electrical insulation application, ideal for protecting low and medium voltage cable connections, polyvinyl chloride (PVC) insulating tapes have good abrasion resistance.

U842 : 0.18mm thickness, excellent resistance to abrasion. High tensile strenght (35 N/cm).

U843-X : thickness 0,13mm. Good tensile strenght (25N/cm). Self-extinguishing, premium quality, they have a very good dielectric strenght (40kV/mm).

Both are compliant with the EU Directive 2011/65/EC (RoHS 2) and the Commission Directive (EU) 2015/863 (RoHS 3).

Hydraulic crimping tool

Application

These crimping tools are designed for the crimping of junction sleeves and lugs.
They are available in 2 versions:
- hydraulic type,
- electro-hydraulic type.

Description

- Hydraulic type:**
- The ergonomic mobile handle enables the beginning of crimping by operating the tool with one hand.
 - The developed force is 50kN maximum.
 - The safety valve and audible "click" ensure efficient crimping and good protection of the hydraulic closing system.
 - The ram retract mechanism is actuated by a release trigger.
 - A 13mm stroke enables crimp connectors to be crimped between 6 and 150mm².
 - The 180° rotating head facilitates use in any situations.
 - The length is 365mm.
 - The carrying case can contain one hydraulic crimping tool and up to 12 dies.
- This hydraulic crimping tool meets the criteria of **NF C 20-130**.
- Electro-hydraulic type:**
- The developed force is 60kN maximum.
 - The crimping time varies between 5 and 8 seconds depending on the section.
 - The return is automatic after complete crimping.
 - The autonomy is approximately 120 crimping operations.
 - The F408 adaptor is used to assemble proposed dies.
 - The product is delivered in a carrying case.

INSTALLATION

These products must be implemented and used in **compliance with the applicable regulations** with a skilled, qualified professional undertaking to do so following the generally accepted rules of the trade.

For **live-line** implementation or handling, the electrician must comply with the requirements for live-line work conditions and must be equipped with the necessary personal protection equipment. The implementation temperature limits are: -10°C to +40°C.

Live-line work is carried out under the responsibility of the ordering customer in compliance with the applicable rules.

Before powering up the equipment, all the required verifications must be carried out.

TOOLS

The product should be installed and used with **suitable tools**.

The screw heads should be tightened with the appropriate tool: **Spanner** for hexagonal cap screws, **flat screwdriver** for slotted screw heads of the right size, **Phillips screwdriver** for cruciform screw heads, **HSHC screw head (awls)** for hollow hexagonal screw heads, etc. The screw heads with no torque-limiting device must be tightened to the recommended torque and must not be tightened again.

RECOMMENDATIONS

The installation instructions must be read carefully before using the product.

The product must be used and implemented in compliance with these recommendations for use and installation instructions. It must be used for the applications for which it was defined by the operator/manager of the network and on an electrical installation that is compliant and compatible with the product.

Never exceed the capacities indicated on the device and in the instructions sheet.

Unless explicitly indicated, products are designed for no-load connection.

ENVIRONMENT

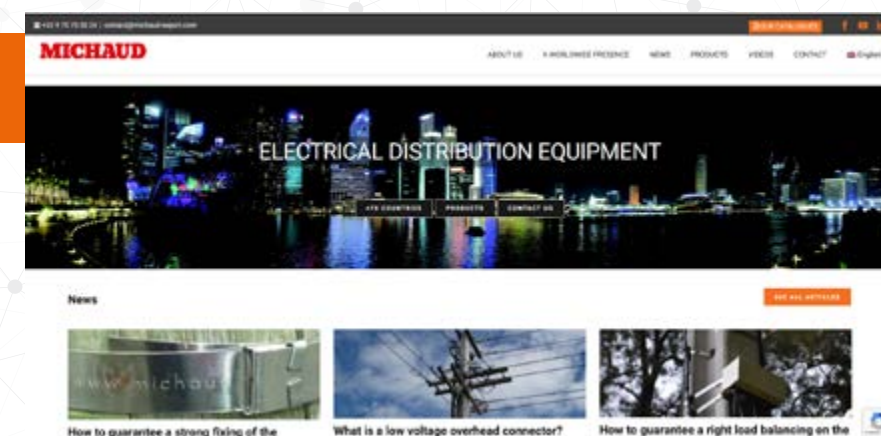

Please gather your waste together and follow the recycling and destruction instructions before leaving the worksite.
